

LIST OF FIGURES

<u>Fig.No.</u>		<u>After page</u>
1	Soil map of Orissa	53
2	Urease activity as a function of organic carbon content	55
3	Urease activity as a function of nitrogen percentage	55
4	Urease activity as function of cation exchange capacity	58
5	The trend in urease activity under the influence of increasing salt concentrations	58
6	Urease activity as a function of available phosphorus content	61
7	Urease activity as a function of total sugar content	61
8	Urease activity as a function calcium percentage	71
9	Urease activity as a function of magnesium percentage	71
10	Urease activity as a function of dehydrogenase activity	79
11	Urease activity as a function of cellulase activity	79
12	Urease activity as a function of amylase activity	79
13	Urease activity as a function of invertase activity	79
14	A percentage basis comparison of organic carbon content, ureolytic population and urease activity of different rhizospheric soils	82
15	Percentage of loss in the activity of different soil enzymes following irradiation	84
16	Decline in percentage of active unsaturation following gamma irradiation	85
17	Decline in specific viscosity following gamma irradiation	85
18	Increase in specific conductance value following gamma irradiation	85
19	Decline in urease activity following gamma irradiation	85
20	Thermogravimetric analysis of soil samples following gamma irradiation	86
