# TABLE OF CONTENTS

1. Introduction 19

   1.a. Antimicrobial agents 21

   1.b. Evolution and history 22

   1.c. The term “antibiotics” 24

   1.d. Synthesis 24

   1.e. Classification of Antibiotics: 25

   1.f. Antimicrobial Resistance 26

   1.g. Contributing Factors to Antibiotic Resistance 28

   1.h. Antibiotic resistance in Human medicine 29

   1.i. Antibiotic resistance in Veterinary medicine 31

   1.j. Natural Occurrence of antibiotic resistance 33

   1.k. Role and impact of Environment 34

   1.l. General Mechanisms of antibiotic resistance 34

   a. Drug modification or inactivation 34

   b. Changes in target site 34

   c. Metabolic pathway Alteration 35

   d. Reduced drug accumulation 35

   Pathogenic Bacteria and Resistance patterns: 37

   a. Staphylococcus *aureus* 37

   b. Streptococcus and Enterococcus 39
c. Pseudomonas *aeruginosa*  

d. *Clostridium difficile*  

e. *Salmonella* and *E. coli*  

f. *Klebsiella pneumoniae*  

g. *Mycobacterium tuberculosis*  

h. *Neisseria gonorrhoeae*  

1.n. Mismanagement of antibiotics in Indian scenario:  

1.o. International Scenario  

1.p. Alternate candidates for antibiotic therapy  

1.q. Resistance-modifying agents  

1.r. Phage therapy  

1.s. Global trends in antibiotic resistance:  

1.t. Surveillance on antibiotic resistance  

1.u. Importance of Laboratory data  

1.v. Importance of surveillance  

1.w. Surveillance of antimicrobial resistance  

1.x. Types of surveillance  

- Comprehensive surveillance  

- Sentinel surveillance  

1.y. Establishment of surveillance
1.z. General data requirement for surveillance

Microbiological Methods: Role in Surveillance

testing: samples for testing

53 1.a.d. Antimicrobial susceptibility tests

54 1.a.e. Antimicrobials for surveillance

54 1.a.f. Significance of antimicrobial surveillance:

54 1.a.g. Time and plan of surveillance

54 1.a.h. In developing countries a plan for surveillance

1.a.i. Role of microbiological method in surveillance

1.2 problem in hand

1.3 objective

1.4 scope of research work

2. Review of literature

2.a. History of resistance

2.b. Commensals: relation to infections

I. Staphylococcus *aureus*

II. Enterococcus

III. Escherichia *coli*

IV. Klebsiella *pneumoniae*

V. Proteus

VI. Pseudomonas

VII. Acinatobacter

Enterobacter

IX. Citrobacter
2.c. Antibiotics for empiric treatment:

2.d. Mode of action of antibiotics-overview:

2.e. Bacterial antibiotic resistance

2.f. General Reasons of Antibiotic resistance:

2.g. Genetic methods of Resistance

2.h. Genetic tools of resistance:

2.i. Emergence and spread of resistance

2.j. Epidemiology

2.k. Epidemiology Of Resistance

2.l. Epidemic Resistant Strains

2.m. Effect of antibiotic resistance: fatality

2.n. Effect of resistance: fatality

2.o. Impact of antimicrobial resistance on mortality

2.p. Cost inference of antibacterial resistance

Impact of formulary changes on resistance

2.q. Impact of formulary changes on resistance

2.r. Social Context

2.s. Consequences of antimicrobial resistance

Isolation, identification and characterization of pathogens:

2.t. Isolation, identification and characterization of pathogens:

2.u. Antibiotic Resistance in urinary infections:

2.v. Resistance in stool infections:

2.w. Resistance in pus and wound infections

2.x. Importance of the study

3. Methods and Material

Nutrient agar

3.a. Nutrient agar

3.b. blood agar

3.c. mac conkey agar

3.d. muller hinton agar
112 3.e. deoxycholate citrate agar
114 3.f. thioglycolate citrate bile salt sucrose agar
116 3.g. alkaline peptone water
118 3.h. cary-blair medium
119 3.i. selenite broth
120 3.j. Brain heart infusion broth
122 3.k. Autoclaving
123 3.l. Sample collection
125 3.m. Collection and transport of blood samples
128 3.n. Blood sample collection
128

3.o. urine sample collection
3.p. Stool sample collection
138 3.q. body fluid collection
141 3.r. Pus swabs and other discharges
142 3.s. sputum
142 3.t. Processing of samples
143 3.t.I. blood culture
143 3.t.II. choice and range of media
144 3.t.III. method
145 3.t.IV. examination of blood culture
145 3.t.V. plating of blood culture
146 3.t.VI. Observation
146 3.t.VII. urine culture
146 3.t.VIII. choice and range of media
146 3.t.IX. urine culture
147 3.t.X. examination of urine culture
148 3.t.XI. observation
149 3.t.XII. Stool culture
149 3.t.XIII. Choice and range of media
149 3.t.XIV. Examination of stool culture
150 3.t.XV. Body fluid culture and pus cultures
choice and range of media
Method
gram's stain
Principle
observation
identification of isolates
catalase test
coagulase test
indole test
voges-proskauer test
methyl red test
citrate test
oxidase test
TSI
motility testing
urease test
Antimicrobial susceptibility test
Biochemical identification and characterization of clinical strains
urine infections
distribution of samples on urine
distribution of urine infections
Sex wise
distribution of blood
sex wise
distribution
Sex wise
distribution
Sex wise
distribution
Sex wise
distribution

217 4.g. Body fluids

217 4.g.I. Sex wise distribution

218 4.g.II. Isolate wise distribution

219 4.h. Resistance among various strains

220 4.h.I. resistance among gram positive strains - resistance patterns of enterococcus

220 4.h.II. Resistance patterns of Staphylococcus aureus

221 4.i. Resistance among Gram negative strains

222 4.i.I. Resistance patterns of E.coli

222 4.i.II. Resistance patterns of Acinetobacter

226 4.i.III. Resistance patterns of Pseudomonas

228 4.i.IV. Resistance patterns of Klebsiella

229 4.i.V. Resistance patterns of Enterobacter

Resistance patterns of Citrobacter

Resistance patterns of Proteus

230 4.i.VI. Antibiotic resistance in GNB’s

231 4.i.VII.

4.j.I. Gentamycin resistance

232 4.i.VIII.

Amikacin resistance

Netilmicin resistance

Ceftriaxone resistance

233 4.j.II.

234 4.j.III.

235 4.j.IV.

236 4.j.V. Cefotaxime resistance

237 4.j.VI. Ceftazidime resistance

238 4.j.VII. Gatifloxacin resistance

239 4.j.VIII. Ciprofloxacin resistance

239 4.j.IX. Ampicillin resistance

239 4.j.X. Imipenem resistance

241 4.j.XI. Cotrimoxazole resistance

242 4.j.XII. Piperacillin-Tazobactem resistance

242 4.j.XIII. Cefaparzone-Sulbactem resistance

244 4.k. Resistance among GPC

245 4.k.I. Penicillin resistance

245 4.k.II. Amoxicillin-Clavulnic acid resistance

246 4.k.III. Clindamycin resistance
