AIMS
AND
OBJECTIVE
AIMS AND OBJECTIVES

This study aims to analyse:

1. Estimation of Toxo IgM, Toxo IgG, Rubella IgM, cytomegalovirus IgM, Herpes IgM in antenatal cases.

2. To find out the incidence of HIV infection in TORCH positive cases.

3. Correlation between HIV and TORCH infection with bad obstetric history. Also to find out the relationship of TORCH infections in relation to age group, parity, socio-economic status and rural or urban background.
