MATERIAL AND METHODS

The present study has been conducted on the randomly collected writing samples of 500 individuals irrespective of their sex to study the various writing characteristic features in the handwriting of a person which are common, peculiar and are useful in determining the left and right hand writings of the persons.

The writing samples were collected from the subjects ranging 18-65 years of age, who were studying or working in various organizations such as schools, colleges, universities, private and public sectors etc. consisting of 250 left handed and 250 right handed persons. The subjects were familiar with the writings in English language. The three writing samples were taken from each individual according to their accustomed hand whether it is left or right hand, while using three types of commonly used writing instruments such as fountain, gel and ball point pen, on white executive bond paper. The matter was dictated to them and they were not allowed to see their previous writing samples taken for the present study. To study the characteristics of each alphabet of Roman script in Capital and Small forms and digit 0-9, the samples were taken as per the Huber & Headrick (1999).

"Our London Business is Good but Vienna and Berlin are Quiet. Mr. D Lloyd has gone to Switzerland and I hope for good news. He will be there for a week at 1496, Zeronott St. and then goes to Turin and Rome and will join Col. Parry and
Our London Business is good but Vienna and Berlin are quiet. Mr. D. Lloyd has gone to Switzerland and I hope for good news. He will be there for a week at 1496. Zeronott St. and then goes to Turin and Rome and will join Col. Parry and arrive at Athens, Greece, Nov. 27th or Dec. 2nd. Letters there should be addressed King James Blvd 3580. We expect chas. E. Fuller Tuesday. Dr. LMC Quaid and Robt. Unger Esq. Left on the Y, X Express tonight.

The literature for the study was collected from the Bundelkhand University, Jhansi, Punjabi University, Patiala Bureau of Identification and various Central and State Forensic Science Laboratories, Directorate Of Forensic Science, Ministry of Home Affairs Government Of India New Delhi. The literature was also collected through Internet and from my Forensic Colleagues living in Britain, Taiwan, Singapore, Philippines and Australia etc.

All the writing samples were studied with the help of epidiascope, universal dactyloscopic outfits, Hand lenses, falmer magnifiers of 10X to 40X power, microscopic lenses, Compound Microscope, Ultraviolet Lamp, Stereomicroscope and other necessary geometrical instruments. The writing samples were very critically and exhaustively examined with regard to the general as well as individual writing characteristics and for identifying characteristics features in determining left and right hand writings.
