ACKNOWLEDGEMENT

It is beyond my capacity to put into lifeless words, the deep sense of gratitude that I feel for my Mentor and guide Dr. R. R. Borude. But for his inspiration, constant encouragement and constructive criticism, it would not have been possible for me to put this thesis in the present form. Having full access to his indepth knowledge on the subject backed by his years of experience and the unassuming person that he is, I had no difficulty in obtaining the facts and material required for the report. I once again thank him for his invaluable advice and guidance, untiring efforts and patient cooperation throughout this period.

My sincere thanks are also due to the staff at the Libraries of Pune University, British Council, and, Ofcourse, Marathwada University, who generously offered me almost free access to their facilities, greatly facilitating the reference work. I am also grateful to Dr. S. W. Deshpande, Dr. C. G. Deshpande and Dr. Usha Ram for their general assistance.

I am also deeply indebted to Mrs. and Mr. Sharad Gore for sparing their valuable time and putting in energy for making available computerised results of the data analysis, charts and graphs which made possible presentation of the report in a very neat, sophisticated, scientific and most accurate manner.
I would also like to make a special reference of Mrs. and Mr. Rajendra Bhave for their so excellently doing the typing and editing of this report on computer and that too well in time.

Last but not list, I place on record and owe utmost thanks to my family members, especially my mother, without whose endless encouragement, physical support at an old age to take care of my children thereby giving me full freedom to be away from family for months and months together for carrying out research work and extensive travelling for data collection.

And finally, I am very much obliged to the authorities of Marathwada Universities for allowing me to undertake this research work and submit this thesis for Ph.D.
