## CONTENT

**Chapter 1** INTRODUCTION  
- Taxonomic position of the genus  
- Distribution and occurrence of the genus  
- Economic importance of the genus  
- Choice of the present work  
- Aims and objectives of the present study

**Chapter 2** REVIEW OF LITERATURE  
- Taxonomic study  
- Leaf architecture  
- Leaf anatomy

**Chapter 3** MATERIALS AND METHODS  
- The Study Area  
- Collection of plant materials  
- Herbarium preparation  
- Identification of specimens  
- Floral study  
- Foliar Epidermal study  
- Leaf Architecture Study  
- Ethnobotanical study  
- Statistical Analysis

**Chapter 4** RESULTS AND OBSERVATION  
- Morphology  
  - Taxonomic treatment of the genus  
  - Key to the subgenus
Enumeration of the species

Subgenus *Urostigma* with key to the species
Subgenus *Pharmacosycea* with key to the species
Subgenus *Sycomorus* with key to the species
Subgenus *Ficus* with key to the species
Subgenus *Sycidium* with key to the species
Subgenus *Synoezia* with key to the species

Anatomy

Foliar epidermal features with artificial key
Leaf architectural features with artificial key

Chapter 5 DISCUSSION

Taxonomy and distribution
Significant findings of the present study
New distributional record for India
Addition to the flora of Assam
Taxonomic significance of morphological characters
District-wise distributional map
Taxonomic significance of foliar epidermis
Taxonomic significance of leaf architecture
Ethnobotany and other uses

Chapter 6
