GLOSSARY

**Basin without Flush:** Indian Style of Latrine.

**Child Mortality Rate:** The probability of dying between the first and fifth birth days.

**Contingency Co-efficient:** Contingency Coefficient (C) is a measure of the degree of relationship, association of dependence of the classifications in the frequency table. The coefficient is calculated as follows (n is the total number of cases in the table):

\[ C = \sqrt{\frac{\chi^2}{\chi^2 + n}} \]

The larger the value of this coefficient, the greater is the degree of association. The maximum value of the coefficient, which is never greater than 1, is determined by the number of rows and columns in the table.
