ACKNOWLEDGEMENT

At the time when I was doing my MSc, I had decided on two things - one - that I would do my further studies / research in the subject “Graph Theory” and two - that as far as possible, under the guidance of Prof. Mrs. N. S. Bhave. After a gap of 10 years, when I actually started work on this, I was firm on my choice of Graph Theory; fortunately, my other desire was also fulfilled.

I learnt a lot during this period of research. At many times I felt that my situation was like the characters in the story - “The Blind Men and the Elephant”. In that tale, the one who touched the elephant’s tail pictured the elephant to be in the shape of a tail; the one who touched the elephant’s legs was sure that this is how the elephant appears like; and so on. In the same way, initially I was deriving my conclusions based on some early results. The important lessons - not getting swayed by these early results; deeply exploring all the possibilities; analysing them again and again, with the help of multiple examples; studying the impact of different constituents of the subject on each other; breaking down large topics into smaller components for study, without losing focus of the big picture; etc. etc - all this was possible to a large extent due to the clear and logical thinking of Prof. Bhave, which helped me along the way. Her unbridled enthusiasm and positive attitude is so infectious; I was able to overcome many barriers - physical tiredness, mental fatigue, responsibilities towards my family - and nothing became a hurdle in my goal. During this whole pe-
riod, I was fortunate to have her strong support, and transparent affection - I will always be indebted to her.

Fortunately, the ancient Indian tradition of Guru-Shishya, still prevails in our Department. Prof. T. T. Raghunathan, who was the Guide of my Guide, during her thesis, showed so much interest and enthusiasm in my work - be it results, or my writing; I have no words to thank him. I am very grateful that I had the benefit of his huge experience in this area; while preparing this thesis. In this same tradition, the other example is Dr. Mrs. C. M. Deshpande. My discussions with her, about accuracy of results, and how to present them, helped me a lot during the preparation of this thesis. I am very grateful to her for going through the entire manuscript in detail, and providing valuable suggestions and inputs.

My discussions with Prof. B. N. Waphare were a great help, with his in-depth analysis and knack of bringing out the right questions - I am thankful to him for all his help. Many thanks to Dr. Shikare and Dr. Kharat, for their encouragement and support. I would also like to thank our department’s office and library staff for their help.

I am grateful to Prof. E. Sampathkumar, for his valuable guidance and suggestions, which led to new thinking about concepts in semigraphs. I must thank Prof. G. A. Patwardhan for clearing my doubts in Design Theory.

During this whole period, I was able to concentrate solely on my research, thanks to the fellowship provided by Department of Science and
Technology, Govt. of India (DST). My thanks to DST for sponsoring this project.

In our (especially Indian) society, one is never alone. We are able to stand up and grow, on the firm foundations of our relationships. I was so confident about everyone in my family, that I had taken their support and encouragement for granted. I cannot thank them enough.

Gratefully

Bhagyashri Bam
