Table of Contents

Preface

Acknowledgements

1 Introduction

1.1 Black holes: Basic concepts

1.1.1 Formation of black holes

1.1.2 Singularity and horizon

1.1.3 As Einstein solutions

1.2 Thermodynamics of black holes

1.2.1 Hawking radiation

1.3 Evidence for the black holes

1.4 Scattering by black holes

1.4.1 Gravitational lensing

1.4.2 Wave scattering

1.4.3 Quasi-normal modes

1.4.4 Definition and boundary conditions

1.4.5 Importance of QNMs

1.5 Outline of the thesis

2 Absorption cross section of SdS, RN extremal and SdS extremal black holes perturbed by scalar fields

2.1 Introduction

2.2 Scalar wave on Schwarzschild-de Sitter black hole

2.2.1 Solution of wave equation in the vicinity of black hole horizon: $r \rightarrow r_b$ (region 1)

2.2.2 Solution of wave equation in the intermediate region: $r > r_b$ (region 2)

2.2.3 Solution of the wave equation at far away from the horizon: $r >> r_b$ (region 3)
2.2.4 Absorption cross section .................................. 35
2.3 RN black hole - Extremal case ................................. 37
  2.3.1 Solution of wave equation in the region 1: \( r \to r_0 \) 38
  2.3.2 Solution of wave equation in the region 2: \( r > r_0 \) 39
  2.3.3 Solution of wave equation in the region 3: \( r >> r_0 \) 39
  2.3.4 Absorption cross section of RN extremal black
    hole .................................................... 41
2.4 Schwarzschild-de Sitter black hole - Extremal case ... 42
  2.4.1 Absorption cross section of SdS extremal black
    hole .................................................... 46
2.5 Conclusion .................................................... 47

3 Absorption cross section of RN black hole ................. 49
  3.1 Introduction ................................................. 49
  3.2 Nature of radial wave functions in different regions of
    RN space-time ............................................ 50
  3.3 Absorption cross section .................................... 56
  3.4 Conclusion .................................................... 60

4 Absorption cross section and emission spectra of Schwarzschild
black hole in Dirac field ...................................... 61
  4.1 Introduction ................................................. 61
  4.2 General metric of a black hole space-time perturbed
    by a Dirac field ........................................... 63
  4.3 Radial solutions of Dirac field in Schwarzschild space-
    time ....................................................... 66
  4.4 Absorption cross section and emission spectra ............ 74
  4.5 Conclusion .................................................... 76

5 Quasi-normal modes of spherically symmetric black
hole space-times with cosmic string in a Dirac field ...... 79
  5.1 Introduction ................................................. 79
