## Contents

**Abbreviations**

i-ii

**Introduction and Review of Literature**

1-27

### Chapter I
Designing novel prophylactic contraceptive(s) using combination of promising spermicidal and microbicidal agents and in vitro evaluation of efficacies.

- Introduction
- Materials and methodology
- Results
- Discussion

28-49

### Chapter II
Establishing the safety of promising agents/combinations for topical intra-vaginal application.

- Introduction
- Materials and methodology
- Results
- Discussion

50-74

### Chapter III
Efficacy of promising agents/combinations in preventing vaginal/cervical inflammation caused by infection with *T.vaginalis*.

- Introduction
- Materials and methodology
- Results
- Discussion

75-85

### Chapter IV
The molecular mechanism of *Trichomonas* infection and proposed mechanism for the anti-*Trichomonas* activity of promising agents/combinations.

- Introduction
- Materials and methodology
- Results
- Discussion

86-100

### Chapter V
A product design utilizing the most promising combination of active ingredients and assessment *in vitro* efficacy.

- Introduction
- Materials and methodology
- Results
- Discussion

101-120

**References**

121-144

**Publications from thesis and related studies**
