
CONTENTS

1	Introduction and Review of Literature	01
2	Isolation, Identification and Screening of Probiotic Lactobacilli of Human Origin	20
3	Probiotic Attributes of Autochthonous <i>Lactobacillus rhamnosus</i> Strains of Human Origin	35
4	Production and Characterization of Extracellular Antimicrobial Peptides of <i>Lactobacillus rhamnosus</i> Fb	58
5	Biotransformation and Detoxification of 4-nitroquinoline-1-oxide by <i>Lactobacillus</i> strains	81
6	Antigenotoxic and Antimutagenic Activities of <i>Lactobacillus rhamnosus</i> Vc against <i>N</i> -methyl- <i>N'</i> -nitro- <i>N</i> -nitrosoguanidine	100
7	Binding of Acridine orange by Probiotic <i>Lactobacillus rhamnosus</i> Strains of Human Origin	112
8	Binding and Biotransformation of Heterocyclic Aromatic Amine 2-amino-3,8-dimethylimidazo-[4,5- <i>f</i>]-quinoxaline by <i>Lactobacillus</i> strains	124
9	Formulation of Probiotic Chocolates using Lyophilized Cells of <i>Lactobacillus rhamnosus</i> Fb	136
10	Summary and Concluding Remarks	147
11	Bibliography	151
12	Appendix	174
