Abstract.................................................................................................................. ii
Table of contents.................................................................................................... vi
List of tables.......................................................................................................... xi
List of figures...................................................................................................... xiii
Objectives of the current study............................................................................. xvii

**CHAPTER-I – INTRODUCTION** ................................................................. 1-10

**CHAPTER-II – REVIEW OF LITERATURE** ........................................... 11-58

2.1 History of product................................................................................ 12

2.2 History and distribution of cashew (*Anacardium occidentale*) ...... 13
  2.2.1 Cashew nut.......................................................... 18
  2.2.2 Cashew apple.................................................... 19
    2.2.2.1 Carbohydrates............................................ 20
    2.2.2.2 Vitamins.................................................... 20
    2.2.2.3 Anti-microbial activities.............................. 21
  2.2.3 Cashew apple products............................................ 21

2.3 Microorganisms....................................................................................... 23
  2.3.1 Yeast biology ....................................................... 24
  2.3.2 Degradation of glucose by *Saccharomyces cerevisiae*.... 24
  2.3.3 Biochemistry of fermentation.................................... 25
  2.3.4 Explanation of the biochemical reactions...................... 27

2.4 Methods for ethanol production.......................................................... 30
  2.4.1 Chemical synthesis method........................................ 30
  2.4.2 Fermentative method................................................. 31
  2.4.3 Different fermentation processes and methods............. 33
    2.4.3.1 Batch fermentation........................................ 34
    2.4.3.2 Fed-batch fermentation.................................. 34
    2.4.3.3 Continuous fermentation.................................. 35
    2.4.3.4 Submerged fermentation (SmF) method........... 35
      2.4.3.4.1 Bioreactors used in submerged fermentation  36
2.4.3.5 Liquid surface fermentation (LSF) method

2.4.3.6 Solid state fermentation (SSF) method

2.5 Factors influencing fermentation

2.5.1 Physical parameters

2.5.1.1 Substrate concentration

2.5.1.2 pH

2.5.1.3 Temperature

2.5.1.4 Oxygen

2.5.1.5 Fermentation time

2.5.1.6 Seed culture volume

2.5.1.7 Seed culture age

2.5.2 Chemical and nutritional parameters

2.5.2.1 Carbon source

2.5.2.2 Nitrogen source

2.5.2.3 Phosphate source

2.5.2.4 Trace elements

2.5.2.5 Metal chelating agents

2.5.2.6 Vitamins

2.6 Response surface methodology (RSM)

2.7 Evaluation of growth kinetics

2.8 Down stream processing

2.9 Qualitative tests for ethanol

2.10 Quantitative determination of ethanol

2.11 Applications of ethanol

CHAPTER-III – MATERIALS AND METHODS

Section A

3.1 Substrate

3.2 Chemicals

3.3 Biochemical analysis of cashew apple juice

3.4 Microorganisms

3.4.1 Morphology

3.4.2 Yeast maintenance

3.4.3 Growth media

Section B

3.11 Analytical methods................................................................. 81
  3.11.1 Determination of moisture content................................. 81
  3.11.2 Determination of cell viability....................................... 81
  3.11.3 Determination of dry weight of biomass......................... 82
  3.11.4 Determination of total sugars........................................ 82
  3.11.5 Determination of ascorbic acid..................................... 83
  3.11.6 Estimation of reducing sugars...................................... 83
  3.11.7 Estimation of protein................................................... 84
  3.11.8 Estimation of ethanol................................................... 85
  3.11.9 Estimation of crude fat............................................... 85
  3.11.10 Estimation of tannin.................................................. 86

CHAPTER-IV - RESULTS AND DISCUSSION................................. 87-190

4.1 Substrate.................................................................................... 88

4.2 Biochemical analysis of cashew apple juice............................ 88
  4.2.1 Moisture content............................................................ 90
  4.2.2 Protein and fat............................................................... 90
  4.2.3 Total sugars................................................................. 90
  4.2.4 Reducing sugars............................................................. 91
  4.2.5 Tannin.............................................................................. 91
  4.2.6 Ascorbic acid................................................................. 91

4.3 Microorganisms........................................................................ 92
  4.3.1 Screening and selection of cultures.................................. 92

4.4 Standardization of physical parameters.................................. 94
  4.4.1 Effect of substrate concentration..................................... 94
  4.4.2 Effect of pH................................................................. 98
  4.4.3 Effect of temperature..................................................... 100
  4.4.4 Effect of agitation......................................................... 102
  4.4.5 Effect of seed culture volume......................................... 104
  4.4.6 Effect of seed culture age............................................... 106

4.5 Standardization of chemical and nutritional parameters.......... 108
  4.5.1 Effect of different nitrogen sources................................. 108
  4.5.2 Effect of different phosphate sources............................... 113
4.5.3 Effect of trace elements ...................................................... 116
4.5.4 Effect of metal chelating agents ........................................ 127
4.5.5 Effect of vitamins ............................................................... 129
4.6 Design of medium- I with standardized parameters .............. 129
  4.6.1 Studies in shake flasks .................................................... 132
  4.6.2 Studies in 5 l. bioreactor ................................................ 132
    4.6.2.1 Effect of agitation ................................................ 134
4.7 Statistical optimization of media components and fermentation conditions .................................................. 137
  4.7.1 Statistical optimization of pH, temperature and urea-set I .......................................................... 139
  4.7.2 Statistical optimization of dipotassium hydrogen phosphate, seed culture volume and time of fermentation set II .......... 150
  4.7.3 Statistical optimization of EDTA, magnesium and agitation-set III ...................................................... 161
  4.7.4 Statistical optimization of biotin, glycine and seed culture age-set IV ..................................................... 172
4.8 Design of medium- II with statistically optimized parameters ..... 173
4.9 Studies in 5 l. bioreactor with statistically optimized medium .... 184
4.10 Comparison of the final ethanol yield ................................... 186
4.11 Evaluation of growth kinetics .............................................. 188

CHAPTER-V – SUMMARY AND CONCLUSIONS ...................... 190-197
5.1 Summary .......................................................... 191
5.2 Conclusions .......................................................... 196

BIBLIOGRAPHY ........................................................................ 198-230

APPENDICES ........................................................................ 231-241
Appendix – A .............................................................. 232
Appendix – B .............................................................. 237
Appendix – C .............................................................. 239
Appendix – D .............................................................. 241
