ACKNOWLEDGEMENTS

The act of creating, of bringing into being of something that did not exist before, gives us humans our most intense and primary satisfaction. This satisfaction approaches fulfillment when one is fortunate to have the extremely able and devoted guidance of a teacher like Dr. H.N. Saxena, M.D., D.M.R.E., my guide, and Professor and Head, Department of Radio-Diagnosis, M.L.B. Medical College Hospital, Jhansi. His breadth and depth of knowledge, his sustained support throughout "spring and autumn" of the present study in all its aspects from the selection of cases to the preparation of the script, shall be cherished for times to come. He not only piloted the study but also ensured it's smooth completion, ironing out the problems. He was very prompt in letting me out of the "anxious moments" as and when they arrived. He gave generously of his time, and labored through the long and arduous task of editing the manuscript, proof reading every page, providing organisation to the perpetually disorganised script. Unfailingly he tolerated numerous mistakes of mine. His seemingly limitless dedication, insight and enthusiasm will always remain a part of me henceforth. For me he is ever a "father-figure" guiding me and providing me strength and hope in moments of despair.
I consider it very precious to have the honour of acknowledging a large debt of gratitude, credit and thankfulness, to my Co-guide Dr. Rama Mitra, M.D., D.G.O., Professor and Head, Department of Obstetrics and Gynaecology, M.L.B. Medical College Hospital, Jhansi, for her prompt and kind permission to permit me to carryout the examination of her patients. Her continuing interest and co-operation in selection of cases was indispensible to the eventual completion of the present work on time. Without her help and expert guidance, successful outcome of this enterprise may not be contemplated.

I must acknowledge the highly valued assistance of my respected teacher Dr. A.K. Gupta, M.D., Associate Professor, Department of Radio-Diagnosis, M.L.B. Medical College Hospital, Jhansi, who gave very generously of his time, and advise during the entire period. His breadth and depth of knowledge, his expertise as a teacher are well acknowledged.

I am pleased to have this opportunity to acknowledge my indebtedness to Dr. T.B.L. Jaiswal, M.D., D.M.R., Associate Professor, Department of Radio-Diagnosis, M.L.B. Medical College Hospital, Jhansi, whose expert guidance was imbibed through out the period of study.
I express my gratitude to Dr. G. Kumar, M.D., Assistant Professor, Department of Radio-Diagnosis, M.L.B. Medical College Hospital, Jhansi, for his everhelping nature and expert guidance that gave me the courage to complete this work.

My sincere thanks to Dr. (Mrs.) Usha Agarwal, M.D., Associate Professor, Department of Obstetrics and Gynaecology, M.L.B. Medical College Hospital, Jhansi, who gave me kind permission to examine her patients. Her dedication to this study went beyond duty.

My colleagues and friends have helped in innumerable ways, I wish to offer my thanks to all of them.

Not to be forgotten is the contribution of technical staff of Department of Radio-Diagnosis, M.L.B. Medical College Hospital, Jhansi in their help and assistance.

A measure of thanks is also due to Mr. K. Lal who patiently and expertly shepherded the manuscript to its finally typed form.

Finally, I remember, I shall never be able to rewind those little years, which my little son has lived through, albeit without me.
