List of Figures

Figure 1: Anatomy of head and neck

Figure 2: Classification of pathological schemes for epithelial dysplasia

Figure 3: Worldwide distribution of head and neck cancer

Figure 4: Top cancer incidences in India in both male and female

Figure 5: Workflow employed for HNSCC secretome analysis

Figure 6: Western blot analysis of OLFM4 and IGFBP3 in the secretome

Figure 7: Immunohistochemical analysis of OLFM4 and IGFBP3

Figure 8: Representative MS/MS spectra of the indicated proteins found to be higher in abundance in the HNSCC secretome

Figure 9: Pathways involved in cisplatin induced cellular effects

Figure 10: Workflow employed for iTRAQ-based quantitative proteomics of HNSCC cell lines

Figure 11: Distribution of differentially expressed proteins in JHU-O11, JHU-O22 and JHU-O29 compared to the normal cell line

Figure 12: Classification of proteins overexpressed in HNSCC cell lines based on (A) biological processes and (B) cellular localization

Figure 13: The network map of the identified proteins involved in DNA replication and repair pathway

Figure 14: Representative MS/MS spectra of peptides from proteins overexpressed in HNSCC cell lines

Figure 15: Immunohistochemical validation of HMGB2 overexpression

Figure 16: Cell viability of HNSCC lines in response to cisplatin and 5-FU

Figure 17: Cell viability of cisplatin and 5-FU treated HNSCC cell lines after siRNA silencing
