List of Tables

Table 1.1 Type and quantum of pollutants released into the coastal ecosystem of India.
Table 1.2 Quantities and waste generation rates in some coastal cities.
Table 1.3 Traffic Handled at major ports during April to March 2006 and 2007.
Table 1.4 Total number of fishing vessels (state-wise) operating along the coastal waters of India.
Table 2.1 a Geographical location and water depth at sampling stations.
Table 2.1 b List of environmental parameters studied and abbreviations used.
Table 2.2 Mean (SD) values of the surface water variables at the seven locations of Mormugao Bay during Sept 2003-July 2004.
Table 2.3 Mean (SD) values of the bottom water variables in the seven locations of Mormugao Bay during Sept 2003-July 2004.
Table 2.4 Results of two-way ANOVA of water parameters in the Mormugao harbour.
Table 2.5 Mean values of the sediment variables in the seven locations of Mormugao Bay during September 2003-July 2004.
Table 2.6 Results of two-way ANOVA of sediment parameters in the Mormugao harbour.
Table 2.7 Results of correlation matrix between environmental parameters.
Table 2.8 PCA loading of water and sediment parameters.
Table 2.9 Primary water quality criteria for SW1 to SW5 category water (CPCB India).
Table 3.1 Seasonal variations of macrobenthic taxa in the study area, 2003-2004.
Table 3.2 Two-way ANOVA shows the variation of benthic parameters in the Mormugao harbour.
Table 3.3 SIMPER analysis based on group obtained from cluster and MDS ordination showing the species that contributed to the differences among the groups.
Table 3.4 Percent composition of dominant species in the study area.
Table 3.5 SIMPER analysis based on group obtained from cluster and MDS ordination showing the species that contributed to the differences among the groups.
Table 3.6 Pearson's correlations coefficient of environmental and benthic parameters.
Table 3.7 Pearson's correlation of dominant species and environmental parameters.
Table 3.8 Results of BIOENV.
Table 3.9 Dominant polychaete species recorded in order of dominance in Mormugao, 1971-2004.

Table 4.1 Range values of water parameters in the study area.

Table 4.2 Macrobenthic community in the area.

Tables 4.3 Dominant macrobenthic species in the study area.

Table 4.4 SIMPER analysis showing the species that contributed to the differences among the three stations.

Table 5.1 Macrobenthic species list of the study area.

Table 5.2 SIMPER analysis based on group obtained from cluster and MDS ordination showing the species that contributed to the differences among the groups.

Table 5.3 Composition of dominant species at various sampling location observed during the present study.

Table 6.1 Major oil spills along the Indian coast since 1970.

Table 7.1 Granulometry for the ten transects in the intertidal region of Kalbadevi Bay

Table 7.2 Shell colour pattern in *Umbonium vestiarium* and percent distribution in the north and south transect of Kalbadevi beach.

Table 7.3 Seasonal variation in the distribution of macrofaunal species at Kalbadevi.

Table 7.4 Seasonal variation in percent composition of macrofaunal group.

Table 7.5 Dominant macrofaunal species during pre monsoon season, Kalbadevi beach.

Table 7.6 Dominant macrofaunal species during monsoon, Kalbadevi beach.

Table 7.7 Dominant macrofaunal abundance during post monsoon, Kalbadevi beach.

Table 8.1 Physico-Chemical parameters of Kalbadevi Bay.

Table 8.2 Sediment texture (%) for the subtidal stations of Kalbadevi.

Table 8.3a Pearson Correlation of environmental parameter.

Table 8.3b PCA for environmental parameters.

Table 8.4 Macrobenthic group abundance in the subtidal area at the baseline stations.

Table 8.5 Macrofaunal species in the subtidal region of Kalbadevi Bay

Table 8.6 SIMPER results of species showing dissimilarity between cluster groups.

Table 8.7 SIMPER results showing dissimilarity based on cluster.

Table 8.8 Correlation between benthic and environmental parameters.
List of figures

Fig 2.1 Location of the study area.

Fig 2.2 Seasonal variation in surface and bottom water temperature, salinity, pH, phosphate, nitrite and nitrate.

Fig 2.3 Seasonal variation in surface and bottom water DO, BOD; PHC, Cd.

Fig 2.4 Seasonal variation of surface and bottom water chl a, phaeo, sediment chl a, OC, sediment Cd, Pb, Hg and sediment texture.

Fig 2.5 PCA of the environmental parameters of the water column and sediment.

Fig 2.6 Variation in rainfall and salinity in the study area during 2003-04

Fig 3.1 Seasonal variation of macrofaunal group abundance in the study area

Fig 3.2 Seasonal variation in macrofaunal abundance in the study area.

Fig 3.3 Bray-Curtis cluster and MDS based on the monthly species abundance. Bubble plot showing the monthly variation in the abundance of dominant species.

Fig 3.4 Seasonal variation in macrofaunal biomass in the study area

Fig 3.5 Seasonal variation of macrofaunal species richness, species evenness and species diversity.

Fig 3.6 Bray-Curtis cluster and MDS ordination based on macrofaunal species abundance. Bubble plot showing the variation in the abundance of the dominant species.

Fig 3.7 Correlation of abundance and biomass with Chl a, phaeo and OC.

Fig 3.8 Correlation of abundance, biomass and species richness with DO, BOD with environmental parameters.

Fig 3.9 Comparison of cumulative ABC curve for 1972-2003 and partial dominance curve for 2003-4.

Fig 3.10 Polychaete amphipoda ratio in the study area

Fig 4.1 Location of the sampling stations in the Mormugao harbour.

Fig 4.2 Monthly variation in OC and sediment chl a at the three stations.

Fig 4.4 Bray-Curtis cluster and MDS based on macrofaunal abundance at the three stations

Fig 4.5 Monthly variation of macrofaunal biomass at the three stations.

Fig. 4.6 Monthly variation in macrofaunal species richness, species evenness and species diversity.

Fig. 5.1 Map showing the location of the sampling site.

Fig. 5.2 Comparison of macrofaunal abundance in the three harbours.
Fig. 5.3 Bray-Curtis cluster and MDS based on macrofaunal abundance in the study area.

Fig. 5.4 Geometric class abundance for Ratnagiri, Mormugao and Karwar.

Fig. 5.5 Comparison of species richness, evenness and diversity between the harbours.

Fig. 5.6 Partial ABC curve of Goa, Ratnagiri and Karwar.

Fig 6.1 Map showing the tanker accidents along the Goa coast.

Fig 6.2 Number of spills in India comparison of east and west coast of India.

Fig 6.3 PHC and Organic carbon concentration in the study area.

Fig. 6.4 Variation in PHC concentration and vertical distribution of PHC at Sinquerim-Calangute-Candolim.

Fig. 7.1 Map showing location of the transects in the intertidal zone of Kalbadevi.

Fig. 7.2 Spatio-Temporal variation of chl a and organic carbon in the study area.

Fig. 7.3 Kite diagram representing seasonal distribution of *U. vestiarium* in the southern and Northern transect.

Fig. 7.4 Distribution of different size class of *U. vestiarium* in the southern and northern transect.

Fig. 7.5 Spatio-temporal variation of macrofaunal abundance in the study area.

Fig. 7.6 Bray-Curtis cluster and MDS based on macrofaunal abundance.

Fig. 7.7 Spatio-temporal variation of macrofaunal biomass in the study area.

Fig. 7.8 Spatio-Temporal variation of macrofaunal species richness, species evenness and species diversity.

Fig. 7.9 Kite diagram showing distribution and abundance of dominant species for the three transect.

Fig. 7.10 Kite diagram of zonation and seasonal distribution of dominant species.

Fig. 7.11 Kite diagram of seasonal distribution of dominant species in the central transect.

Fig. 7.12 Kite diagram showing the zonation and seasonal distribution of dominant species at the southern transect.

Fig. 7.13 Sea gulls on the Southern end of Kalbadevi Bay and Global distribution of *U. vestiarium*.

Fig 8.1 Location of sampling stations in the subtidal region of Kalbadevi.

Fig 8.2 Variation in sediment and water chl a at the baseline stations.

Fig 8.3 Seasonal variation in water and sediment chl a in the study area.
Fig 8.4 Sediment organic carbon at the subtidal sites of Kalbadevi.

Fig 8.5 Variation in macrofaunal group at the baseline stations.

Fig 8.6 Bray-Curtis cluster and MDS ordination based on macrofaunal abundance at the baseline stations.

Fig 8.7 Macrofaunal group biomass at the baseline stations.

Fig 8.8 Macrofaunal species richness, evenness and diversity at baseline stations.

Fig 8.9 Spatio-Temporal variation in macrofaunal abundance.

Fig 8.10 Bray Curtis cluster (a) and MDS (b) based on macrofaunal abundance.

Fig 8.11 Spatio-Temporal variability of macrofaunal biomass.

Fig 8.12 Spatio-Temporal variability of species richness, evenness and diversity.

Fig 9.1 Map showing location of disturbed stations in the intertidal and subtidal region.

Fig 9.2 Macrofaunal parameters in the experimental transect.

Fig 9.3 Variation in water chl a, water phaeopigment, sediment chl a and OC.

Fig 9.4 Variation in subtidal macrofaunal abundance, biomass, Species richness Species evenness and diversity during the experimental disturbance.
List of Plates

Plate 3.1 Some of the dominant polychaete species of Mormugao Harbour
Plate 3.2 Polychaetes of Mormugao harbour
Plate 3.3 Macrofauna from the Mormugao harbour
Plate 7.1 Ilmenite deposit in intertidal region and vegetation of Kalbadevi Bay
Plate 7.2 Sampling at Kalbadevi, station marking and macrofauna sample collection.
Plate 7.3 Distribution and colour pattern in *U. vestiarium*. Macrofauna of Kalbadevi.
Plate 8.1 Polychaete species from the subtidal region of Kalbadevi Bay
Plate 9.1 Simulated mining experiment and sampling in the intertidal region of Kalbadevi Bay
Plate 9.2 Simulated mining experiment in the subtidal region.
Plate 10 Polychaetes of west coast of India
