with the alternative products of plastic products, glass products and iron products. Timber traders mostly encourage the plastic products for door, shelves and window, so the plastic industries increase day by day. But this also creates the land pollution and water pollution. In future running the timber industry may not be a possible one.

Employer satisfaction is must for every industry. But in timber industries majority of the timber trade employees are dissatisfied. It is due to the lack of scope about this trade in future. So the employers should take part in employees’ satisfaction by granting pension, financial assistance, providing purified water, opportunities to promotion, educational allowance to their children, more medical facility and other welfare measure.
