# CONTENTS

## CHAPTER I: BACKGROUND AND MOTIVATION .......... 01

1.1 Introduction .......... 01

1.2 Advantages of laser technology .......... 02

1.3 Requirements for laser processing .......... 04

1.4 Laser driven processes .......... 06
   1.4.1 Pyrolytic processing .......... 07
   1.4.2 Photolytic processing .......... 07

1.5 Laser induced chemical reactions .......... 08
   1.5.1 Reactions on physically or chemically adsorbed layers .......... 09
   1.5.2 Reactions in gaseous phase .......... 11
   1.5.3 Reactions in liquid phase .......... 12
   1.5.4 Reactions driven on the solid substrate .......... 13

1.6 Laser chemical vapor deposition technique .......... 13
   1.6.1 Nucleation .......... 14
   1.6.2 Deposition from adsorbed layers .......... 15
   1.6.3 Gas and liquid phase deposition .......... 16

1.7 Laser physical vapor deposition technique .......... 20
   1.7.1 Laser ablation deposition (LAD) .......... 20
   1.7.2 Laser-solid interaction .......... 21
   1.7.3 Transport of target material to substrate .......... 23
   1.7.4 Material deposition onto the substrate .......... 23
   1.7.5 Advantages of LAD .......... 24
   1.7.6 Problems associated with current LAD technology .......... 25
   1.7.7 Applications of LAD .......... 26

1.8 Importance of deposition technology in modern fabrication processes .......... 28
   1.8.1 Perspective for the future .......... 29

1.9 Motivation .......... 30

1.10 REFERENCES .......... 31
## CHAPTER II: EXPERIMENTAL SYSTEMS AND METHODS

### SECTION A: LASER CHEMICAL VAPOR DEPOSITION AND LASER ABLATION DEPOSITION SYSTEMS

#### II.A.1 Pulsed excimer laser
   - **II.A.1.1 Principle**
   - **II.A.1.2 Pump mechanism**
   - **II.A.1.3 Gas mixture**
   - **II.A.1.4 Preionization**
   - **II.A.1.5 HV discharge circuitry**
   - **II.A.1.6 Modular control system**

#### II.A.2 CO₂ gas laser
   - **II.A.2.1 Mechanism**
   - **II.A.2.2 Design and operation**

#### II.A.3 Laser optics and beam delivery

#### II.A.4 Computer controlled x-y translation table

#### II.A.5 Laser chemical vapor deposition system
   - **II.A.5.1 Reaction chamber**
   - **II.A.5.2 Gas manifold**

#### II.A.6 Laser ablation deposition system

### SECTION B: GENERAL CHARACTERIZATION TECHNIQUES

#### II.B.1 Low angle x-ray diffraction technique

#### II.B.2 Optical emission spectroscopy technique
   - **II.B.2.1 CSMA system**
   - **II.B.2.2 Detector**
   - **II.B.2.3 Detector controller**
   - **II.B.2.4 Gate pulse generator**
   - **II.B.2.5 General setup**
   - **II.B.2.6 System operation**

#### II.B.3 Scanning electron microscopy technique

#### II.B.4 Infrared spectroscopy technique

### II.A.B REFERENCES
