### Chapter 1 Synthetic Studies towards Pyrrolizidine Alkaloid, (S)-pyrrolam A

- Introduction to Pyrrolizidine Alkaloids: 1
- Review of Literature: 3
- Present Work: 7

#### Section A: Domino Oxidation-intermolecular Wittig Approach to (S)-Pyrrolam A

- Objective: 8
- Results and Discussion: 8
- Conclusion: 17

#### Section B: Intramolecular Wittig Approach to (S)-Pyrrolam A

- Objective: 18
- Results and Discussion: 18
- Conclusion: 25

### Experimental Section

- Spectra: 26
- References: 47

### Chapter 2 Synthetic Studies towards Kainic Acid using Tandem Wittig-Intramolecular Ene Reaction

- Introduction: 49
- Review of Literature: 50
- Objective: 59
- Present Work: 60
- Conclusion: 71

### Experimental Section

- Spectra: 72
- References: 83

### Chapter 3 Wittig Approach and Sharpless Asymmetric Dihydroxylation Reaction towards the Synthesis of 3-Hydroxy-L-proline and Tedanalactam

#### Section A: Synthetic Studies towards trans-3-hydroxy-L-proline

- Introduction: 93
Chapter 4 Wittig Approach towards the Synthesis of Pyrrolidine Alkaloids: Hygrine, Norhygrine, Bgugaine

Section A: Approach towards the Synthesis of (S)-Hygrine and (S)-Norhygrine
  Introduction 142
  Review of Literature 144
  Objective 147
  Present Work 147
  Results and Discussion 148
  Conclusion 156
  Experimental Section 157
  Spectra 165
  References 171

Section B: Approach towards the Synthesis of (R)-Bgugaine
  Introduction 173
  Review of Literature 174
  Objective 176
  Present Work 176
  Results and Discussion 177
  Conclusion 179
  Experimental Section 180
  Spectra 182
  References 184
Chapter 5 Proline Derivatives for Studies in Asymmetric Organocatalysis Reaction

**Section A: Synthesis of Polymeric Organocatalyst: Immobilized Proline Analogue**
- Introduction to Immobilized Proline Derivative 185
- Review of Literature for organocatalyst immobilization 186
- Objective 188
- Present Work 188
- Results and Discussion 189
- Conclusion 191

**Section B: Aldol Reaction Catalysed by Proline Analogues**
- Introduction to Direct Asymmetric Aldol Reaction 192
- Results and Discussion 193
  - 1) Aldol reaction using protonated allyl prolinate 193
  - 2) Aldol reaction using polymeric organocatalyst 196
- Conclusion 199

**Section C: N-Methyl pyrrolidine Mediated Asymmetric Baylis-Hillman Reaction**
- Introduction to Baylis-Hillman Reaction 200
- Present Work 201
- Results and Discussion 202
- Conclusion 203

**Experimental Section**
- Spectra 212
- References 217
