Acknowledgments

This thesis work was performed at Department of Technology, Savitribai Phule Pune University, Pune, Maharashtra, India.

First of all I would like to express my most sincere gratitude to my Ph.D. guide, Dr. Santosh S. Hosmani for his support and guidance throughout the study. I would like to thank him for his outstanding commitment and the numerous scientific discussions which have considerably contributed towards the completion of aims and objectives of the project. I have highly benefited from his stimulating discussions, valuable inputs and continuous encouragement.

I am thankful to my co-guide, Dr. R. K. P. Singh, for his support and guidance throughout the study. I would like to thank him for making available the resources at Kalyani Centre for Technology and Innovation (KCTI), Bharat Forge Ltd. Pune, Maharashtra, India. I would also like to thank the staff members of KCTI for their support during my study.

I would like to thank Bharat Forge Ltd. Pune, Maharashtra, India, for providing the scholarship to work full-time on the project and sponsoring the project work.

I am thankful to Dr. Shashi Bhushan Arya, Department of Metallurgical and Materials Engineering, N. I. T. K., Surathkal, India, for his help to conduct the experiments related to corrosion study. I especially thank Dr. Carlos A. Figueroa, Centro de Cincias Exatas e Tecnologia, Universidade de Caxias do Sul, Caxias do Sul, RS, Brazil, for sharing his views related to plasma nitriding technology and conducting the GDOES characterization for this study.

I would like to thank Dr. S. I. Patil (H.O.D) and Dr. Aditya Abhyankar (Dean), Department of Technology, for their co-operation during my study at the Department of Technology.

I would like to thank MRC, M. N. I. T. Jaipur for their cooperation in using XRD and
GA-XRD characterization. I would like to thank C. O. E. Pune and N. I. T. K., Surathkal, India for their co-operation in conducting research work and Bhat Metals Research Pvt. Ltd, Pune, India for conducting the plasma nitriding cycles. I am thankful to Prof. K. Chattopadhyay and Prof. S. Suwas (both at the Department of Materials Engineering, Indian Institute of Science, Bangalore, India) for their cooperation. Partial support of the Networking Resource Centre for Materials (NRC-M), a scheme of University Grants Commission (UGC), India, is kindly acknowledged.

I appreciate all my friends for their warm company and cooperation during my study. I would like to thank my father Madhukar Gatey and mother Radha Gatey for their strong support during my study. Last but not least I would like to thank my wife Vaishali Gatey for standing by me all the time and her continuous encouragement without which thesis would not have been possible.
