Research, like many other human endeavours, is a collaborative effort. Research cannot be accomplished rewarding unless we have continuous stimulation and help to inspire, guide and persuade us. Although it would be a gargantuan task to extensively and fittingly thank everyone who has directly or indirectly helped in the fruition of my thesis, I am attempting to do so with the best of my abilities. I wish to apologize, if I miss anybody.

To begin with, I would like to extent my heartfelt gratitude and appreciation to my mentor, Dr. Javed N. Agrewala. His influence in my quest to become an independent immunologist has been phenomenal. He nurtured, trained and took personal interest in my research endeavors. I vividly recollect the gratifying interactions and discussions I have had with him. He is not only an adroit supervisor but also a gifted teacher. Besides honing my scientific aptitude, he also helped me develop positive attitude that is all important to pursue science. I am also grateful for his patience and his benevolence with which he approached any of my mistakes resulting out of my naivety. I am ever grateful to him for three things; a timely Ph.D. with nearly a dozen publications, nurturing my confidence to pursue science independently, inculcating perception, patience and perseverance. Thank you Sir, for this wonderful opportunity. I enjoyed working with you. I hope to keep the flag flying!!

I sincerely thank Dr. Girish Sahni, Director of the Institute, for giving me an opportunity to pursue PhD at IMTECH. I am thankful for providing excellent facilities and inspirational leadership for the institute. I am very thankful to Dr. U.D. Gupta and Dr. Pushpa Gupta, National JALMA Institute for Leprosy and Other Mycobacterial Diseases, Agra for helping me with protection studies, which adds great value to this project. Their familial affection always made me feel at home in JALMA and even the tough and laborious experiments became facile in their presence. My sincere thanks are also due for Prof. David Jackson and Dr. W. Zeng, University of Melbourne, Australia, for synthesis of lipilated peptides. Prof. Ashok Janmeja, GMCH, Chandigarh, and Prof. B. N. Dutta, Medicos Center, Chandigarh, are acknowledged for providing human samples and histopathological studies, respectively. My heartfelt gratitude is due for Dr. Shiv Pillai, Harvard Medical School, USA and Dr. Susmit Suvas, Oakland University, USA for their support, advice and discussions.

I am extremely grateful to all the scientists, Institute of Microbial Technology, who were my teachers at course work for extending invaluable support whenever I needed. Especially, I would like to thank Dr. Pradip Chakraborty, Coordinator for JNU PhD program, for his active involvement to ensure smooth running of academic affairs. I also express my gratitude to Dr. Pradip Sen for his discussions in immunology, Dr. Anand Bacchawat for his advice on many occasions and also the “Wednesday Journal Club”), Dr. Sekhar Majumdar for radio-isotopes, Dr. Dibyendu Sarkar for his advice on various occasions and the encouraging pats on the shoulder, Dr. S. Karthikeyan for discussions regarding peptide-MHC binding studies, Dr. Balvinder Singh for his advice and trouble shooting in immunoinformatics and Dr. Ashish Ganguly for discussions and lighter moments!! I also extend my deepest sense of gratitude to all previous teachers of my school and college. My sincere regards to Dr. Neeraj Khatri for helping in procurement of experimental animals.

I sincerely thank the staff of administration (especially Mr. Parag and Mr. Rishi), library, finance and accounts, ESD, instrumentation division, store and purchase for their cooperation and help during my stay at IMTECH. I specially appreciate the staff of bioinformatics centre, for their diligence and efficiency in maintaining computers and internet facility. I am also thankful to the staff of animal house for maintenance of animals. I am very grateful to workers of the mess for untiring services at all times.

The amicable milieu of Dr. Javed’s Lab was really inspirational and instrumental to conduct good research. Mr. Rajendra Dass deserves a special word of appreciation for indenting necessary reagents
and his words of encouragements. During my five year stint, I was fortunate to work with very gifted colleagues. In my initial years, Vijender took me under his wings and taught me discipline and techniques that I never thought I'd be able to master. In the final year, Sathi was associated with me and helped me 'up the ante' of T cell exhaustion work. Shweta was a remarkable personality to be associated with. I am really thankful to her for being there for me at all times. She made me feel very comfortable with the lab when I first joined. I wish to convey special thanks to Fatima for helping me with some of the experiments related to humoral response to peptide. I also feel happy to have Rama and Nargis as my junior colleagues; their constant support has helped me greatly. The latest arrivals to our lab have been the “favorite four”! Pradeep, Auro, Amir and Weshely have been admirable colleagues. I am also indebted to all the project assistants who tirelessly worked with me over the years. I take this opportunity to appreciate the efforts of Arun, Himesh, Lalita, Monika, Pankaj, Susanta, Sudeep and Sunil (JALMA). Mr. Jitender Singh is acknowledged for the smooth running of BSL-3. I also appreciate the sincere efforts of Mr. Joginder for maintaining cleanliness in the BSL-3.

I am very thankful to my batch mates especially, Ashok, Bhuvi, Neeraj, Amit, Eshu, Deepshikha, Satindra, Sanjay, Sathish, Satya, Ranjana and Payal for all the evergreen memorable moments inside and outside IMTECH. Spending time with you guys in class or at the hostel was a real fun. I recall the pleasant moments spent with my senior and junior colleagues, especially Vibhu, Sanjoy, Gangu, Manish Datt, Swati Halder, Kamlesh Akkes, Jaspreet, Hemant, Mahesh, Yashpal, Hardeep, Soniya, Vinod, Sandeep, Jagpreet, Rehman and Aslam. I am ever thankful to their personal care and interest in my endeavors. Very special thanks for my childhood and college friends whose love and affection have made me perpetually indebted. Regular calls from Suresh, Naga, Anbu, ASK, Francis, Sivashankar, Kartik and Niraj have helped me rejuvenate, often walk down the memory lane and feel young!!

I am also very thankful to Department of Biotechnology, India, for my fellowship to pursue Ph.D.

Every child feels that his/her parents are the best in the world. I am no exception!! I always fall short of words and expressions when I want to thank my parents. Unlike many who are into science, I was a late bloomer. I am very thankful to my parents for trusting me that I would do well in my life at some point of time. They always believed in me and my dreams and have always encouraged following my heart. They gave me enough freedom to choose, to think and decide on my priorities. They have been a perennial source of inspiration and strength. I am proud to say that you are the reason that I am able to write this now "Mom and Dad, I am really lucky to have you as my parents. I can't think of anyone who's played a more significant role in shaping the person that I am today". And, yes at times, I'm a bit lousy at showing it!! Thanks a lot to my dearest sister, Soundarya, whose unconditional love and unstinting support has always been my confidence. She is a trustworthy comrade at home and will remain our little princess. On this special occasion, I warmly recollect the times I have spent with my late grandfather, Dr. JCPA. He was a versatile genius. We would have hours of discussions on science, history, philosophy, sports etc. I am ever thankful for his holistic influence on my persona. Lastly, but by no means the least, I thank my wife and my long time best friend, Priya. She has been a tower of strength, and my better half in the ups and downs of my life. I am especially thankful for her extraordinary patience and understanding during my days as a Ph.D. student. With her, I am me!! I thank her for that and for inspiring me to climb higher and higher. I feel elated to welcome our little son Siddarth, into family. Nothing can be a better reward than having his cheerful and refreshing presence in my life. All my family members have been biologists; I hope this legacy continues with little Siddu!!

(U. Gouthaman)
