ACKNOWLEDGEMENTS

In conducting the present research study I have received immense help and guidance from many persons. This was spread over the entire spectrum of the research work, from the first stage of preparing an appropriate research project outline to the subsequent stages of detailed project design, finalisation of research methodology, preparation of detailed questionnaires/schedules for field work, computer programming and tabulation of data, analysis of both secondary and primary data and report writing. Many distinguished scholars and friends have given valuable comments, criticisms and suggestions for improving this dissertation.

First and foremost, I am deeply indebted to Dr.K.C.Jankaranarayanan, Professor and Head of the Department of Applied Economics, Cochin University of Science and Technology, my Supervisor, for the keen interest he showed at all stages of the present study and for sustained and meticulous guidance in the preparation of this dissertation.

I am also thankful to Dr.P.G.K.Panikar and Dr.Thomas Isaac of the Centre for Development Studies,
Trivandrum and Dr. P.T. Joseph of the Indian Institute for Regional Development Studies, Kottayam for their valuable suggestions for improving the original draft.

I wish to express my sincere thanks to all the officers and staff of the Coconut Development Board, Kerala State Planning Board, Directorate of Economics and Statistics, Directorate of Agriculture, Libraries of the Centre for Development Studies and the Indian Institute for Regional Development Studies for the help they rendered in enabling me to collect data on the subject. Special mention has to be made to the very valuable discussions I had with Shri. Jacob Mathew and Dr. Prafulla K. Das and others at the Central Plantation Crops Research Institute, Kasargod on both agronomic and economic aspects of coconut cultivation in Kerala.

To the Centre for Development Studies, Trivandrum, I offer my sincere thanks for providing the necessary assistance in statistical analysis on their computer.

No study based on primary data collection is possible without the active cooperation of the respondents. To my pleasant surprise, I received
excellent cooperation from the coconut farmers in Kottayam and Alleppey districts who were selected as respondents in my field study. Space does not permit me to mention even the names of some of the leading cultivators in the study areas; but, without their cooperation it would not have been possible for me to collect both quantitative and qualitative data from the field and to understand the complexities of the coconut economy of Kerala state.
