Abstract	Page No.
List of Tables	XIV-XVII
List of Figures	XX-XV

Chapter 1

General Introduction and Literature Review

1.1	Introduction	01
1.2	History of IPMC	06
1.3	Working Principle of IPMC	09
1.4	Structure of IPMC	14
	1.4.1 Polymer layer	17
	1.4.2 Layer of electrode	18
	1.4.3 Morphology of electrode	18
	1.4.4 Thickness of electrode	19
	1.4.5 Electroding metal	19
	1.4.6 Intermediate layer	21
1.5	Manufacturing Techniques	22
	1.5.1 Physical metal loading	25
	1.5.2 Casting method	25
	1.5.3 Hot-pressing method	25
	1.5.4 Electroless plating method	27
	1.5.5 Micro fabrication method	28
1.6	IPMC Actuator: Characteristics, Performance and Measurements	28
	1.6.1 Generative force	28
	1.6.2 Frequency response test	29
	1.6.3 Characteristics of IPMC under the variation of thickness	30
	1.6.4 Characteristics of IPMC under the variation of input voltage	30
	1.6.5 Effect of different cations	30
1.7	Application	31

1.7.1	Robotics application	31
1.7.2	Space application	31
1.7.3	Human-machine interface	34
1.7.4	Medical applications	34
1.7.5	Micro-manipulation applications	34
1.8	Main Objective of Research	35
1.9	Literature Review	36
	References	51

Chapter 2

Kraton Based Ionic Polymer Metal Composite (IPMC) Actuator

2.1	Introduction	61
2.2	Experimental	62
2.2.1	Reagents and instruments	62
2.2.2	Preparation of the reagent solutions	62
2.2.3	Membrane preparation	62
2.2.4	Water uptake	63
2.2.5	Ion-exchange capacity	63
2.2.6	Electroless plating	63
2.2.7	Proton conductivity	64
2.2.8	Water loss	65
2.2.9	Electrical properties	65
2.3	Results and Discussion	67
2.3.1	Water uptake	67
2.3.2	Ion-exchange capacity and proton conductivity studies	67
2.3.3	Scanning electron microscope study	67
2.3.4	Water loss from polymer membrane	70
2.3.5	Electrical property	74
2.3.6	Bending behaviour	74
2.4	Conclusion	78
	References	79

Chapter 3

Development of Sulfonated Poly(Vinyl Alcohol)/Polpyrrole Based Ionic Polymer Metal Composite (IPMC) Actuator and its Characterization

3.1	Introduction	81
3.2	Experimental	84
3.2.1	Reagents and instruments	84
3.2.2	Preparation of the reagent solutions	84
3.2.3	Fabrication of membrane	84
3.2.4	Water uptake or water holding capacity	85
3.2.5	Ion-exchange capacity	85
3.2.6	Electroless plating	85
3.2.7	Proton conductivity	85
3.2.8	Water loss	85
3.2.9	Fourier transform infra-red study	85
3.2.10	Scanning electron microscopy study	87
3.2.11	Electrical properties	87
3.3	Results and Discussion	88
3.3.1	Chemical properties	88
3.3.1.1	Water uptake or water holding capacity	88
3.3.1.2	Ion-exchange capacity and proton conductivity	88
3.3.1.3	Scanning electron microscopy study	91
3.3.1.4	FTIR Study	91
3.3.1.5	Water loss	91
3.3.2	Electrical properties	92
3.3.3	Electromechanical characteristics	92
3.3.4	Mechanical properties	105
3.3.5	Design and development of an SPVA-Py-Pt IPMC actuator based micro-gripping system	105
3.4	Conclusion	117
	References	118

Chapter 4

Study and Preparation of Highly Water Stable Polyacrylonitrile-Kraton- Graphene Composite Membrane for Bending Actuator Toward Robotic Application

4.1	Introduction	121
4.2	Experimental	123
4.2.1	Reagents and instruments	123
4.2.2	Preparation of the reagent solutions	123
4.2.3	Fabrication of membrane	123
4.2.4	Water uptake or water holding capacity	124
4.2.5	Ion-exchange capacity	124
4.2.6	Electroless plating	124
4.2.7	Proton conductivity	124
4.2.8	Water loss	124
4.2.9	Fourier transform infra-red study	124
4.2.10	Scanning electron microscopy study	125
4.2.11	X-Ray diffraction study	125
4.2.12	Thermal studies	125
4.2.13	Electrical properties	125
4.2.14	Design of PAN-KR-GR-Pt based IPMC actuator based dexterous handling system	125
4.3	Results and Discussion	127
4.3.1	Chemical properties	127
4.3.1.1	Water uptake capacity	127
4.3.1.2	IEC and proton conductivity	127
4.3.1.3	Water loss	127
4.3.1.4	SEM	130
4.3.1.5	FTIR	130
4.3.1.6	XRD and TGA	130
4.3.2	Electrical properties	132
4.3.3	Electromechanical properties	132
4.3.4	Mechanical properties (force behavior analysis)	145
4.3.5	Development of dexterous handling device	145

4.4	Conclusion	150
	References	151

Chapter 5

Fabrication of Silver Nano Powder Embedded Kraton Polymer Actuator and its Characterization

5.1	Introduction	153
5.2	Experimental	154
	5.2.1 Reagents and instruments	154
	5.2.2 Fabrication of membrane	154
	5.2.3 Water retention capacity	154
	5.2.4 Ion-exchange capacity	154
	5.2.5 Water loss	155
	5.2.6 Proton conductivity	155
	4.2.7 Fourier transform infra-red study	155
	4.2.8 Scanning electron microscopy study	155
	5.2.9 X-Ray diffraction study	155
	5.2.10 Thermal studies	155
	5.2.11 Electrical properties	155
	5.2.12 Electromechanical characterization	156
5.3	Results and Discussion	159
5.4	Conclusion	180
	References	181

Chapter 6

A Study of Kraton/Graphene Composite Polymer Membrane Based IPMC Actuator Application

6.1	Introduction	183
6.2	Experimental	185
	6.2.1 Reagents and instruments	185
	6.2.2 Preparation of the reagent solutions	185
	6.2.3 Membrane fabrication	185
	6.2.4 Water uptake or water holding capacity	186

6.2.5	Ion-exchange capacity	186
6.2.6	Electroless plating	186
6.2.7	Proton conductivity	186
6.2.8	Water loss	186
6.2.9	Fourier transform infra-red study	186
6.2.10	Scanning electron microscopy and EDX study	186
6.2.11	X-Ray diffraction study	187
6.2.12	Thermal studies	187
6.2.13	Electrical properties	187
6.3	Results and Discussion	188
6.4	Conclusion	212
	References	213
