# Table of Contents

Abbreviations i  
Synopsis iii  

Chapter I  

Brief introduction to Microwaves and ionic liquids  

1.1 Introduction 1  
1.1.1 Twelve basic principles of green Chemistry 2  
1.1.2 A green synthesis in chemical laboratory 5  
1.1.3 Use of water as a solvent in organic synthesis 7  

1.2 Microwaves 8  
1.2.1 History of microwave 9  
1.2.2 Microwaves for Organic Synthesis 11  
1.2.3 Microwave instrument 11  
1.2.4 Reaction medium 13  
1.2.5 Advantages 13  
1.2.6 Application of microwaves in chemical synthesis 14  

1.3 Ionic liquids 24  
1.3.1 Properties of ionic liquids 25  
1.3.2 Types of ionic liquids 26  
1.3.3 Preparation of ionic liquids 27  
1.3.4 Ionic liquids as organocatalyst 28  
1.3.5 Application of ionic liquids in chemical synthesis 29  

References 35  

Chapter II  

Synthesis of triazoloquinazolinone and benzimidazoquinazolinone derivatives  

2.1 Introduction 40  
2.2 Present work 47  
2.3 Experimental 55  
References 64  

Chapter III  

Synthesis of 1-(benzenesulfonyl)-3-methyl-1H-imidazolium chlorides  

3.1 Introduction 66  
3.2 Present work 79  
3.3 Experimental 81  
References 86
Chapter IV

Synthesis of bis(indolyl)methanes, 1,8-dioxo-octahydroxanthenes, 1,8-dioxooctahydroquinazolinone derivatives

Part A: Synthesis of bis(indolyl)methanes

4A.1 Introduction 88
4A.2 Present work 93
4A.3 Experimental 98
  References 103

Part B: Synthesis of 1,8-dioxo-octahydroxanthenes

4B.1 Introduction 106
4B.2 Present work 112
4B.3 Experimental 118
  References 124

Part C: Synthesis of 1,8-dioxo-octahydroquinazolinone

4C.1 Introduction 126
4C.2 Present work 130
4C.3 Experimental 134
  References 140

Chapter V

Synthesis of novel 10-(phenylsulfonyl)pyrimido[1,2-a]benzimidazol (10H) one derivatives

5.1 Introduction 141
5.2 Present work 146
5.3 Experimental 156
  References 179
