CHAPTER 1 INTRODUCTION

Chemical Speciation
Catabolism of Amino acid
L-Aspartic acid
Ethylenediamine
Cobalt
Nickel
Copper
Solvents
1, 4-Dioxan
1, 2-Propanediol
Significance of proposed study

REFERENCES

CHAPTER 2 EXPERIMENTAL PROCEDURES AND DATA

PROCESSING

SEC 1 EXPERIMENTAL

Preparation of solutions
Electrometric titration assembly
Calibration of glass combination pH electrode
Equilibration of glass electrode in aquo-organic media
Determination of correction factor
Titration procedure
CHAPTER 3 PROTONATION EQUILIBRIA OF L-ASPARTIC ACID AND ETHYLENEDIAMINE 90

SEC 1 CALCULATION OF PROTONATION CONSTANTS

Preprocessing of data
Mathematical models for acido-basic equilibria
Effect of systematic errors

SEC 2 EFFECT OF DIELECTRIC CONSTANT OF SOLVENT ON PROTONATION EQUILIBRIA

SEC 3 DISTRIBUTION DIAGRAMS

REFERENCES
CHAPTER 4  BINARY COMPLEXES

SEC 1  STABILITY CONSTANTS OF BINARY COMPLEXES  124

Introduction
Formation of species
Selection of best fit model
Retrieval of protonation constants
Perturbation in stability constants due to systematic errors

SEC 2  EFFECT OF SOLVENT ON METAL-LIGAND EQUILIBRIA

SEC 3  DISTRIBUTION DIAGRAMS

L-Aspartic acid complexes
Ethylenediamine complexes
Structures of binary complexes

REFERENCES

CHAPTER 5  TERNARY COMPLEXES

SEC 1  STABILITY CONSTANTS OF TERNARY COMPLEXES  197

Introduction
Stability constants
Literature survey
Alkalimetric titration data
Selection of best fit models
Effect of systematic errors
Stability of ternary complexes
SEC 2 EFFECT OF CO-SOLVENT

SEC 3 DISTRIBUTION DIAGRAMS

In PG - and Dox-water mixtures
Structures of ternary complexes

CONCLUSIONS
