

CONTENTS

<u>CHAPTER NO.</u>	<u>TITLE OF THE CHAPTER</u>	<u>PAGE NO.</u>
I	INTRODUCTION	1
	I.1 Transport processes	3
	A Uncoupled transport processes	6
	B Coupled transport processes	8
	I.2 Thermodynamic properties	10
	I.3 Review of thermodynamic and transport properties of solutions involving Acetonitrile	15
	A. Thermodynamic properties	15
	B. Transport properties	30
	C. Miscellaneous	36
	I.4 Object of the investigation	46
	REFERENCES	48-56
II	EXPERIMENTAL	
	II.1 Reagents	57
	II.2 Determination of electro-kinetic parameters	60
	A. Apparatus	61
	B. Experimental Procedure	62
	C. Sources of error and Precautions taken	63
	D. Measurement of density	64

II.3	Determination of activity coefficients and thermodynamic functions of transfer	66
A.	Preparation of amalgams	67
B.	The apparatus	67
C.	The experimental procedure	68
D.	Sources of error	69
	REFERENCES	70

III RESULTS AND DISCUSSION

III.1	Discussion of electro-kinetic data	
A.	Evaluation of phenomenological coefficients	71
B.	Effect of concentration on phenomenological coefficients	79
C.	Efficiency of maximum energy conversion	82
D.	Relaxation time	85
E.	Entropy production	87
III.2	Discussion of e.m.f. data	
A.	Estimation of standard molal potentials	90
B.	Estimation of mean molal activity coefficients	98
C.	Estimation of thermodynamic functions of cell	107
D.	Estimation of thermodynamic functions of transfer	112
	REFERENCES	119- 121

IV SUMMARY

IV.1	Transport properties	122
IV.2	Thermodynamic properties	124
