List of Tables

Tables 1 to 10. Rank correlation coefficient matrix (Kendall's Tau) of environmental parameters during the years 1974-1975 and 1975-1976 from Stations I to V.

Tables 11 to 15. Percentage of sand, silt, clay and organic carbon in sediment samples collected from Stations I to V during the period from March 1974 to March 1976.

Tables 16 to 20. The mean number of various groups of organisms (expressed per 0.1 m²) in samples collected fortnightly (first year) and monthly (second year) from Stations I to V during the period from March 1974 to March 1976.

Table 21. Number of species and species diversity (H') values for the total number of polychaetes per 0.1 m² areas in all the five stations investigated.

Tables 22 to 26. Biomass (wet and dry weights) of the macrobenthos per 0.1 m² from stations I to V during the period from March 1974 to March 1976.

Table 27. Mean standing crop of macrobenthos from stations I to V during the years 1974-75 and 1975-76.

Table 28. Animal matter present in the gut content of five species of prawns present in the Cochin Estuary.
