## I  DETERMINISTIC CHAOS: AN INTRODUCTION

1.1 What is chaotic dynamics? 2  
1.2 Simple methods to identify chaos 6  
1.3 Important routes for the transition to chaos 13  
1.4 The quantitative measures 18  
1.5 Importance of deterministic chaos 30

## II  MATHEMATICAL MODELS OF CHAOTIC DYNAMICS

2.1 One dimensional mappings: The logistic map 33  
2.2 Higher dimensional models 36  
2.3 One dimensional maps and universality 42  
2.4 A 'modulated' logistic map 52

## III  BIFURCATIONS AND UNIVERSALITY IN THE MODULATED LOGISTIC MAP

3.1 Bifurcation structure and linear stability analysis 56  
3.2 Approximate renormalisation methods and calculation of universal constants 68  
3.3 Universal ordering of periodic windows 75

## IV  OBSERVATION AND CHARACTERISATION OF CHAOS

4.1 Lyapunov exponents of the map 85  
4.2 The strange attractors of the map 93  
4.3 Fractal and information dimensions 97

## V  CONCLUDING REMARKS
