

LIST OF TABLES

- Table-1: Details of the species and accessions of plants collected for the present study and the codes used.
- Table-2: Details of ISSR Primers used, bands amplified and level of polymorphism in 25 accessions of *Vigna umbellata*.
- Table-3: Jaccard's similarity among 25 accessions of *Vigna umbellata* as derived from ISSR analysis.
- Table-4: Population genetics parameters for different accessions of *Vigna umbellata*.
- Table-5: Coefficient of gene differentiation and estimated gene flow among different populations of *Vigna umbellata*.
- Table-6: Details of RAPD Primers used and bands amplified for genetic diversity assessment among accessions of *Vigna mungo* and *Vigna radiata*.
- Table-7: Jaccard's table for estimation of similarities among and between accessions of *Vigna mungo* and *Vigna radiata* as revealed from RAPD analysis.
- Table-8: Name and sequence of ISSR primers used, details of bands amplified and level of polymorphism detected among accessions of *Vigna mungo* and *Vigna radiata* accessions.
- Table-9: Jaccard's coefficient of similarity among members of *Vigna mungo* and *Vigna radiata* as revealed from ISSR analysis.
- Table-10: Co-efficient of similarity among the genotypes of *Vigna mungo* and *Vigna radiata* with application combined RAPD and ISSR markers.
- Table-11: RAPD primers used, bands amplified and polymorphism detected in species of *Vigna*.
- Table-12: Jaccard's similarity among all the species of *Vigna* as derived from RAPD analysis
- Table-13: Details of ISSR Primers used, bands amplified and percent of polymorphism in all species of *Vigna*.
- Table-14: Jaccard's similarity table for all the species of the genus *Vigna* as found from ISSR analysis.
- Table-15: Jaccard's similarity for all the species of *Vigna* based on both RAPD and ISSR analysis.
- Table-16: Name and sequence of RAPD primers used, bands amplified and percent of polymorphism observed in all the species and accessions of *Vigna* and *Phaseolus*.
- Table-17: Table of Jaccard's similarity showing level of similarity among the species and accessions of *Vigna* and *Phaseolus*.

Table-18: ISSR primers used, bands amplified and percent polymorphism among all the species and accessions of *Vigna* and *Phaseolus*.

Table-19: Jaccard's similarity table for all the species and genotypes of the *Vigna* and *Phaseolus* as inferred from ISSR analysis.

Table-20: Table of Jaccard's similarity for all the taxa of *Vigna* and *Phaseolus* based on combined RAPD and SSR data

Table-21: Details of RAPD primers used, fragments amplified and polymorphism detected among the species and accessions of *Dolichos* and *Lablab*.

Table-22: Jaccard's similarity table for all the taxa of *Dolichos* and *Lablab* as derived from RAPD analysis.

Table-23: Names and sequences of ISSR primers used, bands amplified and level of polymorphism among *Dolichos* and *Lablab* accessions.

Table-24: Jaccard's similarity table for all the taxa of the genus *Dolichos* and *Lablab* as derived from ISSR data.

Table-25: Table of Jaccard's similarity among the accessions of *Dolichos* and *Lablab* as revealed from combined RAPD and ISSR data.

Table-26: Details of RAPD primers used, bands amplified and polymorphism detected among all the species and accessions of *Phaseolinae*.

Table-27: Jaccard's table of similarity for all species and accessions of 17 species of *Phaseolinae* using RAPD data.

Table-28: ISSR primers and bands amplified by them in all the species and their accessions.

Table-29: Jaccard's similarity table derived from ISSR data for all species and accessions of *Phaseolinae*.

Table-30: Jaccard's table of similarity among all the accessions and species of *Phaseolinae* as derived from.
