## Chapter 1

### Introduction

**An overview on inflammation and anti-inflammatory drugs**

1.1 Inflammation

1.2 Cellular components of inflammation

1.3 Mediators of inflammation

   1.3.1 Lipid mediators

      1.3.1.1 Cyclooxygenases and prostaglandins

      1.3.1.2 Lipoxygenases and leukotrienes

   1.3.2 Nitric oxide synthase and nitric oxide

   1.3.3 Cytokines

      1.3.3.1 Tumor necrosis factor-α

      1.3.3.2 Interleukin-6

1.4 Cell signaling cascades in inflammation

   1.4.1 NF-κB activation and inflammatory response

   1.4.2 Mitogen activated protein kinases and inflammation

1.5 Inflammatory disorders

1.6 Arthritis

1.7 Architecture of articular cartilage

1.8 Osteoarthritis and rheumatoid arthritis (RA)

1.9 Pathogenesis of rheumatoid arthritis

1.10 Risk factors of rheumatoid arthritis

1.11 Complications associated with rheumatoid arthritis

1.12 Inflammatory mediators involved in the progression of RA

   1.12.1 Role of lipid mediators in the progression of RA

   1.12.2 Role of nitric oxide in the progression of RA

   1.12.3 Role of cytokines in the progression of RA

   1.12.4 Role of NF-κB in the progression of RA

   1.12.5 Oxidative stress and rheumatoid arthritis
Chapter 2
Materials and Methods

2.1 Materials ................................................................. 55
  2.1.1 Plant material ......................................................... 55
  2.1.2 Chemicals .............................................................. 55
  2.1.3 Animals ................................................................. 56
  2.1.4 Preparation of plant extract ...................................... 56
    2.1.4.1 Preparation of root methanolic extract of Bacopa .... 56
    2.1.4.2 Preparation of root aqueous extract of Bacopa ....... 57
    2.1.4.3 Preparation of aqueous extract of Bacopa ............ 57
    2.1.4.4 Preparation of hot water extract of Bacopa .......... 57
    2.1.4.5 Preparation of ethanolic extract of Bacopa .......... 57
    2.1.4.6 Preparation of methanolic extract of Bacopa ......... 57
  2.1.5 Fractionation of BME ............................................. 57
  2.1.6 Preparation of Bacoside enriched fraction .................. 58

2.2 Methods .............................................................. 58
  2.2.1 Carrageen induced rat paw edema assay ................. 58
2.2.2 Induction of collagen induced arthritis in rats ......................... 59
2.2.3 Induction of adjuvant induced arthritis in rats .......................... 61
2.2.4 Cotton pellet test ..................................................................... 61
2.2.5 LPS lethal study: endotoxin model ......................................... 62
2.2.6 Assay of inflammatory mediators ........................................... 62
  2.2.6.1 Isolation of monocytes ..................................................... 62
  2.2.6.2 Assay of total cyclooxygenase activity ............................... 62
  2.2.6.3 Assay of cyclooxygenase-2 inhibition ............................... 63
  2.2.6.4 Assay of lipoxygenase .................................................... 63
  2.2.6.5 Assay of myeloperoxidase .............................................. 64
  2.2.6.6 Assay of nitric oxide synthase ......................................... 65
  2.2.6.7 Assay of nitrite levels ..................................................... 65
  2.2.6.8 Assay of interleukin-6 by RT-PCR ................................. 66
  2.2.6.9 Assay of prostaglandin E2 ............................................. 67
2.2.7 Assay of antioxidant status and lipid peroxidation .................... 67
  2.2.7.1 Assay of superoxide dismutase ....................................... 67
  2.2.7.2 Assay of reduced glutathione ........................................ 68
  2.2.7.3 Assay of malondialdehyde ............................................ 68
  2.2.7.4 Assay of acute phase proteins ....................................... 69
2.2.8 Enzymes involved in the degradation of proteoglycans .......... 69
  2.2.8.1 Isolation of lysosomes .................................................. 69
  2.2.8.2 Assay of β-glucuronidase ............................................. 70
  2.2.8.3 Assay of β-hexosaminidase ......................................... 70
  2.2.8.4 Assay of cathepsin-D ................................................... 71
  2.2.8.5 Assay of collagenase .................................................... 71
  2.2.8.6 Assay of hyaluronidase .............................................. 71
2.2.9 Measurement of GAG levels ................................................. 72
2.2.10 Assay of ALP ..................................................................... 73
2.2.11 Assay of SGOT and SGPT .................................................. 73
2.2.12 Assay of LDH ..................................................................... 73
2.2.13 Histopathological analysis ................................................... 73
2.2.14 Culture of hPBMCs ............................................................ 74
2.2.15 Isolation of nucleus and assay of p65 subunit of NF-κB ........ 74
2.2.16 Whole blood cytokine assay: assay of TNF-α ......................... 75
2.2.17 Assay of protein ...................................................................... 75
2.2.18 Statistical analysis .................................................................. 76

Chapter 3

Evaluation of anti-inflammatory activity of *Bacopa monniera* in acute and chronic inflammatory models

3.1 Introduction .................................................................................. 77
3.2 Materials and Methods ................................................................. 79
3.3 Results ......................................................................................... 79
  3.3.1 Effect of different extracts of *Bacopa monniera* on carrageenan induced paw edema formation ......................... 79
  3.3.2 Effect of different concentrations of *Bacopa monniera* on carrageenan induced paw edema formation .............. 80
  3.3.3 Effect of BME on paw edema inhibition at various time points ................................................................. 81
  3.3.4 Effect of BME on COX activity in paw tissue of carrageenan induced rats ...................................................... 82
  3.3.5 Effect of BME on LOX activity in rat mononuclear cells of carrageenan induced rats .................................. 82
  3.3.6 Effect of BME on MPO activity in paw tissue of carrageenan induced rats ...................................................... 83
  3.3.7 Effect of BME on NOS activity in paw tissue of carrageenan induced rats ...................................................... 84
  3.3.8 Effect of BME on cotton pellet test ........................................ 86
  3.3.9 Effect of BME on TNF-α release *in vitro* .............................. 86
3.4 Discussion .................................................................................. 87

Chapter 4

Studies on the anti-arthritic effects of *Bacopa monniera* (L.) Wettst

4.1 Introduction .................................................................................. 93

*Section 1: Effect of BME on AIA in rats*

4.2 Materials and Methods ................................................................. 96
4.3 Results ......................................................................................... 96
  4.3.1 Effect of BME on paw volume changes in AIA rats .......... 96
4.3.2 Effect of BME on body weight changes in AIA rats .......... 98
4.3.3 Effect of BME on serum enzymes in AIA rats .................. 98
4.3.4 Effect of BME on organ weight changes in AIA rats .......... 99
4.3.5 Effect of BME on lipid peroxidation in liver and spleen of AIA rats ....................................................... 100
4.3.6 Effect of BME on SOD activity in liver and spleen of AIA rats .......................................................................... 100
4.3.7 Effect of BME on GSH levels in liver and spleen of AIA rats ................................................................................. 101
4.3.8 Effect of BME on β-glucuronidase and β-hexosaminidase activities in liver and spleen of AIA rats ...................... 102
4.3.9 Effect of BME on hyaluronidase, collagenase and cathepsin D activities in cartilage of AIA rats ......................... 102
4.3.10 Effect of BME on GAG levels in articular cartilage of AIA rats .................................................................................. 103
4.3.11 Effect of BME on PGE_2 levels in paw tissue of AIA rats.... 104

Section 2: Effect of BME on CIA in rats

4.4 Materials and Methods .............................................................. 105
4.5 Results ....................................................................................... 105
4.5.1 Effect of BME on arthritic index in CIA rats ...................... 105
4.5.2 Effect of BME on 5-LOX activity in mononuclear cells of CIA rats ................................................................. 106
4.5.3 Effect of BME on COX activity in paw tissue of CIA rats ...... 107
4.5.4 Effect of BME on MPO activity in articular cartilage of CIA rats ............................................................................. 108
4.5.5 Effect of BME on β-glucuronidase and β-hexosaminidase activities in articular cartilage of CIA rats ..................... 109
4.5.6 Effect of BME on NOS activity in synovial effusate of CIA rats ................................................................................. 110
4.5.7 Effect of BME on anti-collagen II production in serum of CIA rats ................................................................. 111
4.5.8 Effect of BME on histopathological changes in joints of CIA rats ............................................................................. 112
4.6 Discussion .................................................................................. 114
Chapter 5

Studies on the anti-inflammatory activity of fractions isolated from crude extract of *Bacopa monniera* (L.) Wettst

5.1 Introduction ........................................................................................................ 121
5.2 Materials and Methods .................................................................................. 122
5.3 Results ............................................................................................................ 123

Section 1: Evaluation of different fractions of BME for anti-inflammatory activity

5.3.1 Effect of different fractions isolated from BME on carrageenan induced paw edema .......................................................... 123
5.3.2 Effect of CF on LPS activated IL-6 production by hPBMCs *in vitro* .......................................................... 124
5.3.3 Effect of CF on LPS activated nitrite production hPBMCs *in vitro* .......................................................... 124

Section 2: Evaluation of chloroform fraction of BME for anti-arthritic activity

5.3.4 Effect of CF on paw volume in AIA rats .............................................. 125
5.3.5 Effect of CF on 5-LOX activity in mononuclear cells of AIA rats .......................................................... 126
5.3.6 Effect of CF on COX activity in paw tissue of AIA rats ........... 126
5.3.7 Effect of CF on PGE$_2$ level in paw tissue and articular cartilage of AIA rats .......................................................... 127
5.3.8 Effect of CF on NOS activity and nitrite production in synovial effusate of AIA rats .......................................................... 128
5.3.9 Effect of CF on MPO activity in paw tissue of AIA rats ........... 129
5.3.10 Effect of CF on IL-6 expression in blood mononuclear cells of AIA rats .......................................................... 129
5.3.11 Effect of CF on GAG levels in articular cartilage of AIA rats .......................................................... 130
5.3.12 Effect of acute phase proteins in serum of AIA rats ............... 131
5.3.13 Effect of CF on histopathological changes in paw tissue of AIA rats .......................................................... 131

Section 3: Evaluation of purified fractions isolated from CF for anti-inflammatory activity

5.3.14 Effect of fractions purified from CF on carrageenan induced paw edema in rats .......................................................... 133
5.3.15 Isolation and structural elucidation of active constituent ........ 134

5.4 Discussion ........................................................................................................ 136
Chapter 6

Studies on the anti-inflammatory activity of Betulinic acid

6.1 Introduction ................................................................. 142
6.2 Materials and Methods ............................................... 143
6.3 Results ....................................................................... 144

Section 1: Effect of betulinic acid on LPS induced inflammatory mediators

6.3.1 Effect of betulinic acid on LPS induced PGE\textsubscript{2} release by hPBMCs ............................................................... 144
6.3.2 Effect of betulinic acid on LPS induced IL-6 release by hPBMCs ........................................................................ 145
6.3.3 Effect of betulinic acid on hPBMC viability ................... 145
6.3.4 Effect of betulinic acid and MAPK inhibitors on LPS activated IL-6 production by hPBMCs .............................................. 147
6.3.5 Effect of betulinic acid and MAPK inhibitors on LPS induced NF-\textkappaB activation by hPBMCs .............................................. 149

Section 2: Effect of betulinic acid on carrageenan induced inflammation

6.3.6 Effect of betulinic acid on carrageenan induced paw edema assay ............................................................................ 150
6.3.7 Effect of betulinic acid on carrageenan induced IL-6 expression in paw tissue ......................................................... 150
6.3.8 Effect of betulinic acid on carrageenan induced PGE\textsubscript{2} production in paw tissue ......................................................... 151

Section 2: Effect of betulinic acid on carrageenan induced inflammation

6.3.9 Effect of betulinic acid on LPS induced endotoxin challenge .......................................................................................... 152
6.3.10 Effect of betulinic acid on histopathological changes in lungs and liver of LPS challenged mice ..................................... 152

6.4 Discussion .................................................................. 155

Chapter 7

Summary and Conclusions ..................................................... 160

Literature cited .................................................................. 164
List of tables and figures ...................................................... 201
List of publications ............................................................. 205
