LIST OF TABLES

Table 1.1 Electrolyte pH and composition, anodization conditions, and size of the resulting nanotubes .................................................. 16
Table 1.2 Effect of anodization voltage on the morphology of the resulting TiO$_2$ nanotube arrays, for a 70 h 2% HF-DMSO anodization .......... 20
Table 1.3 Tabulation of three generations of fabrication of titania nanotubes with electrolyte systems, corresponding references and resulting pore diameter and tubular length ............................................. 37
Table 2.1 Morphological parameters of nanotubes fabricated in different ratios of HF/EG at 40V for 24 hours .............................................. 83
Table 2.2 Morphological parameters of the nanotubes prepared in three electrolytic systems: ............................................................. 84
Table 3.1 Effect of HF concentration and HF/EG content ....................... 114
Table 3.2 pH and conductivity values of freshly prepared HF/EG ............ 115
Table 3.3 Fitted $R_1$, $R_2$, $R_3$ values of 0.5, 2, 5, and 7-wt% HF/EG systems for all the volume ratios ................................................. 119
Table 3.4 Viscosity values of different concentration blends of HF and EG calculated using Refutas equation ...................................... 127
Table 4.1 pH and conductivity values of freshly prepared HF/EG electrolyte system measurements of HF/EG system ...................... 150
Table 4.2 pH and conductivity values of aged HF/EG at different anodization conditions .............................................................. 150
Table 4.3 Tabulation of I-V data of conventional TiO$_2$ nanotubes with honeycomb-like (HC) nanostructures ...................................... 158
Table 4.4 Comparison of dye quantification analysis and surface area measurement ................................................................. 159
