

ACKNOWLEDGEMENTS

It is a common experience of every research scholar at dissertation to find that he has only 'scratched at the surface' of his field and however creative and original he has aimed to be, many of his ideas and research have come equally from stimulating associates. I am indebted to such a large number of friends and colleagues who have helped me in my research work that I hope no one will feel slighted by the physical impossibility of listing every name.

I take this opportunity to express my deep gratitude for the constant encouragement and skilful guidance of my teacher Dr. S.F. Patil, Reader in Physical Chemistry, University of Poona, Pune. He has been extremely kind and considerate in extending his expert counsel from time to time and without his supervision, the present work would not have taken the form in which it appears today.

It has been a privilege to have had Dr. H.J. Arnikar, Professor Emeritus, as my teacher who introduced me the field of diffusion. I am gratefully indebted to him for his stimulating discussions and timely suggestions.

I am thankful to Professor V.K. Phansalkar, Head of the Chemistry Department, University of Poona, for the facilities extended during the course of research.

I should also like to thank my brother Satish and friend Veena for constant encouragement during the research, Miss L.N. Pavangadkar, Mr. B.B. Pawar and other technical staff for their timely help and cooperation.

The financial assistance in the form of a U.G.C. scholarship from our University is also gratefully acknowledged.

Department of Chemistry  
University of Poona  
Pune - 411 007.
