

Contents

1	Introduction	1
1.1	Amphibians and their importance	3
1.2	Amphibians of tropical rainforests	5
1.3	Tropical rainforests of India	8
1.4	Biodiversity of the Western Ghats – a global hotspot	11
1.5	Western Ghats of Karnataka	15
1.6	Amphibians of Western Ghats –endemism and new species discovery	19
1.7	Scope of the present study	23
1.8	Objectives of the study	26
2	Review of literature	27
2.1	Declining amphibian populations	28
2.2	Amphibian research in India	33
2.3	Amphibian research in the Western Ghats	36
2.4	Amphibian research in Karnataka	38
3	Materials and Methods	41
3.1	Study landscape	42
3.2	Floristics	43
3.3	Tropical wet evergreen forests	46
3.4	Secondary evergreen and semi-evergreen forests	47
3.5	The four study locations	48
3.5.1	Kudremukh National Park – Undisturbed forests	53
3.5.2	Kudremukh National Park – Disturbed forests	55
3.5.3	Agumbe RF – Undisturbed forests	55
3.5.4	Agumbe RF – Disturbed forests	56
3.5.5	Someshwar WLS	56
3.5.6	Addoor	57
3.6	Study methodology	58
3.6.1	Identification of amphibians	58
3.6.2	Sampling strategy	60
3.6.3	Data analysis	62
4	Results and Discussion	64
4.1	Species richness	69
4.2	Species abundance, dominance and seasonal variations	73
4.3	Species diversity	84
4.4	Species similarity and overlap	87
4.5	Endemic and rare species	88

5	Summary and Conclusions	91
5.1	Disturbance and species diversity	93
5.2	Rarity of species	95
5.3	Recommendations for future research and conservation of amphibians in the Western Ghats	96
5.4	Epilogue	98
	Bibliography	101
