ACKNOWLEDGEMENTS

I wish to express my sincere gratitude to Dr. T.R. Sreedhara Murthy my research guide. It has been a privilege to work with him especially for his liberal stance throughout this research programme. It would be pertinent here for me to appreciate the academic freedom he gave to 'fluctuate' between, the 'Davisian School' and that of 'Kings'. I also wish to express my sincere thanks to him for giving me an opportunity to work in research projects sponsored by the Departments of Ocean Development, and Environment, Government of India, through which I was exposed to regional connotations of Geomorphology and Sedimentology. My association with him has been rewarding and memorable in more than one aspect.

It has been very kind of Dr. K.R. Subrahmanya, Chairman, Department of Marine Geology, Mangalore University for providing the department facilities.

Professor V. Subramanyam, Department of Geology, Indian Institute of Technology, Bombay is sincerely appreciated for his constructive suggestions pertaining to 'Erosional Surfaces' and Quantitative analysis during the early phase of this work. Professor R. Vaidyanadhan, Department of Geography, Andhra University, Waltair is particularly thanked for the numerous occasions when he spent time discussing, suggesting and critically assessing the evolution of landforms of the Indian peninsula. Dr. B.P. Radhakrishna, Editor, Journal geological Society of India, is sincerely thanked for the few but rewarding sessions when 'the genesis' of the Western Ghats were discussed. Professor K.R. Dikshit formerly of the Department of Geography, Poona University is highly appreciated for his scintillating discussions and yet shrewed academic suggestions pertaining to Meandering Systems and Morphometric variable systems. Professor C.R. Twidale, University Adelaide is sincerely thanked for providing a series of research material, especially on inselbergs.

I wish to thank Dr. C. Raju, Department of Statistics, Mysore University for his keen and unstinted persistence with the software. Shri. Aftab Ahmed, Computer Centre, Mysore University is sincerely thanked for the time he devoted in providing the most 'inaccessible' computer facility.
Manjunatha Reddy, Nagendra and Ahmed Talbi Research Fellows, Department of Geology, Mysore University too deserve a word of appreciation.

At this juncture I wish to record my sincere gratitude to numerous academicians and teachers who have inspired me and kept the zeal of research aflame in me. Some of whom, in particular are Professors A.S. Janardhan and J.C.V. Sastrı of the Department of Geology, Mysore University, Drs. R. Shankar, A.C. Narayan, Mangalore University and Dr. T.A. Vishwanath, Department of Geology, Goa University.

I wish to thank my friends Mr. M. Prithviraj, R. Sashidhar, J. Sadanand, Raja Ram Tolpadı, Valarian Rodrigues, Patabi Ram and Madhav of the Mangalore University for their warm encouragement.

Mr. Ananda Kumar, Field assistant has always endured the long hours of field work, I sincerely thank him for his enthusiasm and 'quaeres' in the field.

Miss Merlyn D'Souza of M/s. Kulyadikar & Co., Computer Division is thanked for her patient and helpful assistance in the final preparation and layout of the thesis. Shri. Ratnakar and Satish are thanked for the preliminary drafts.

At the end of a section like this the most heart felt acknowledgements I would like to thank my parents and family members for their encouragement, understanding *(I was absent on demanding occasions) and support throughout my career. Finally, I owe three people the success of this work who are more than friends to me they are A.R. Karbassı, Y.V. Dongre and T.N. Sreedhara.
