List of Figures

1.1 Tuning Fork Diagram .................................................. 2
1.2 An elliptical galaxy NGC 4621 ....................................... 3
1.3 A normal spiral galaxy NGC 5457 ................................. 4
1.4 A barred spiral galaxy NGC 3992 ................................. 4
1.5 An irregular galaxy NGC 4449 ....................................... 5
1.6 Variation of physical quantities along Hubble sequence - I ........ 6
1.7 Variation of physical quantities along Hubble sequence - II ....... 7
1.8 Variation of physical quantities along Hubble sequence - III ..... 8
1.9 Variation of B-V colour along Hubble sequence .................. 9
1.10 The Antennae galaxies ................................................. 9
1.11 Merger tree diagram .................................................. 13

2.1 Morphology-Density Relation (Dressler, 1980b) ................. 19
2.2 Summary of the regions in clusters where key physical mechanisms are likely to operate ........................................... 22
2.3 The merger rates vs redshift ......................................... 24
2.4 Evolution of early type fraction in clusters since z ~ 1 .......... 25

3.1 The analytical relation between concentration index, B/T and Sérsic index ......................................................... 32
3.2 The centering correction in asymmetry measurement applied to galaxy NGC 5585 .................................................. 33
3.3 The algorithm to find empty background region .................. 36
3.4 Diagnostic output from PyMorph .................................... 38
3.5 The algorithm to create the mask image ........................... 42
3.6 Flowchart of PyMorph .................................................. 43
3.7 Sample input configuration file for PyMorph ....................... 45
LIST OF FIGURES

3.8 The comparison of CAS parameters from PyMorph with the value given by Conselice (2003) .............................................. 50
3.9 The comparison of GM parameters from PyMorph with the values given by Lotz et al. (2004) ......................................... 51
3.10 Input and recovered parameter values of simulated galaxies .... 53
3.11 The fractional error on the recovered parameter values of simulated galaxies ................................................................. 54
3.12 Input and recovered $B/T$ values of galaxies .......................... 55
3.13 The architecture of Parallel PyMorph ................................. 56

4.1 The image of cluster CL 0024 + 16 with the spectroscopically confirmed members .......................................................... 62
4.2 The image of cluster CL 0303 + 17 with the spectroscopically confirmed members .......................................................... 63
4.3 A schematic representation of drizzle .................................... 65
4.4 The distribution of SExtractor MAG_AUTO magnitudes ........ 67
4.5 The distribution of $\chi^2$ of all the galaxies ............................. 70
4.6 The variation of $B/T$ with sky ......................................... 72
4.7 The variation of $B/T$ with PSF ....................................... 73
4.8 The relation between quantitative structural parameters and Hubble T-type ................................................................. 73
4.9 Variation of concentration index with Hubble T-type ............. 74
4.10 Evolution of mean value of the bulge-to-total luminosity ratio ... 76
4.11 Evolution of mean value of Sérsic index ............................. 76
4.12 Evolution of fraction of bulge-dominated galaxies .................. 77
4.13 Evolution of various morphological quantities of galaxy clusters with $\sigma > 1000$ km s$^{-1}$ and $\sigma < 1000$ km s$^{-1}$ ................. 81
4.14 The relation between various morphological quantities and velocity dispersion of galaxy clusters ............................ 82

5.1 The estimated local projected density ................................. 89
5.2 Estimated projected density using different number of neighbours .... 90
5.3 Estimated projected density using different limiting magnitudes ... 90
5.4 The variation of the average $B/T$ of galaxies with local projected density ................................................................. 93
5.5 The variation of galaxy morphology types with local projected density ................................................................. 93
5.6 The variation of the average Sérsic index with local projected density ................................................................. 94
5.7 The $f_{\mu}$-density relation at different redshifts .......................... 97
5.8 The relation between $\langle B/T \rangle$ and median $n$ to density at different redshifts .................................................. 98
5.9 Evolution of morphology in $\Sigma > 500 \text{ Mpc}^{-2}$ and $\Sigma < 500 \text{ Mpc}^{-2}$ regions 99
5.10 Evolution of PEG and PSG fractions .................................................. 100
5.11 Evolution of $\langle B/T \rangle$ and median $n$ in $\Sigma > 500 \text{ Mpc}^{-2}$ and $\Sigma < 500$ Mpc$^{-2}$ regions .................................................. 101
5.12 Quantitative morphology - density relation for massive ($\sigma > 1000$ kms$^{-1}$) and low mass ($\sigma < 1000$ kms$^{-1}$) clusters ......................... 102
5.13 Evolution of quantitative morphology - density relation for massive ($\sigma > 1000$ kms$^{-1}$) and low mass ($\sigma < 1000$ kms$^{-1}$) clusters ......................... 107
6.1 Variation of $\langle B/T \rangle$ and median $n$ with the distance from the cluster centre .................................................. 114
6.2 Variation of different morphological fractions with the distance from the centre of the cluster .................................................. 115
6.3 Relation between $\langle B/T \rangle$ and median $n$ to the distance from the cluster centre at different redshifts .................................................. 118
6.4 Relation between different morphological fractions to the cluster-centric radii at different redshifts .................................................. 119
6.5 Quantitative morphology-radius relation for massive and low mass clusters .................................................. 120
