TABLE OF CONTENTS

LIST OF TABLES..............................................................I-III
LIST OF FIGURES............................................................IV-VI
LIST OF PLATES.............................................................VII
ABBREVIATIONS............................................................VIII-IX

ABSTRACT.................................................................1-5

CHAPTER 1

Introduction...............................................................6-53

1.1 What are functional foods?
1.2 Need for functional food
1.3 Design and development of functional food
1.4 Design and development of functional food
1.5 Fruit wines and red wine as functional beverage-on going research
   1.5.1 Total phenolics and antioxidant activity
   1.5.2 Therapeutic value of red wine: in vivo evidence
       1.5.2.1 Role of red wine on cardiovascular diseases
       1.5.2.2 Role of red wine in diabetes mellitus
   1.5.3 Therapeutic value of fruit wine: in vivo evidence
1.6 Probiotic as a functional food-current status
   1.6.1 Therapeutic value of probiotic-in vivo evidences
   1.6.2 Non-dairy probiotic beverage
       1.6.2.1 Traditional beverages
       1.6.2.2 Commercial beverages
   1.6.3 Research and development in non-dairy probiotic
       1.6.3.1 Cereal-based beverages
       1.6.3.2 Vegetables-based beverages
       1.6.3.3 Fruit-based beverages
1.7 Aim of the present study
CHAPTER 2

Screening of fruit matrices for development of functional beverages

Abstract

2.1 Introduction

2.2 Materials and methods
   2.2.1 Chemicals and reagents
   2.2.2 Collection of fruits and extraction of juice
   2.2.3 Estimation of total phenolic content (TPC)
   2.2.4 Evaluation of antioxidant activities
   2.2.5 Determination of reducing sugar
   2.2.6 Organic acid analysis of selected fruit matrices
   2.2.7 HPLC determination of flavonoids of selected fruit matrices
   2.2.8 Sensory evaluation
   2.2.9 Statistical analysis

2.3 Results and discussions
   2.3.1 Screening of fruit matrices
   2.3.2 Seabuckthorn as a raw material
   2.3.3 Physico-chemical evaluation of seabuckthorn

2.4 Conclusions

CHAPTER 3

Standardization of process technology for development of wine (Functional beverage I) from selected fruit matrix (seabuckthorn)

Abstract

3.1 Introduction

3.2 Materials and methods
3.2.1 Chemicals and reagents
3.2.2 Yeast strains
3.2.3 Estimation of ethanol tolerance
3.2.4 Estimation of osmo-tolerance
3.2.5 Estimation of thermo-tolerance
3.2.6 Optimization of process technology for development of an antioxidant of an antioxidant rich seabuckthorn wine
3.2.7 Estimation of total phenolic content (TPC)
3.2.8 Estimation of reducing sugar

3.3 Results and discussion
3.3.1 Screening of yeast strains for development of an antioxidant rich seabuckthorn wine (Functional beverage I)
   3.3.1.1 Ethanol tolerance
   3.3.1.2 Osmo-tolerance
   3.3.1.3 Thermo-tolerance
3.3.2 Optimization of process technology for the development of an antioxidant rich seabuckthorn wine (Functional beverage I)
   3.3.2.1 Maceration
   3.3.2.2 Juice adjustment
   3.3.2.3 Fermentation
   3.3.2.4 Improvements and advantages of the standardized method

3.4 Conclusions

CHAPTER 4

Evaluation of physico-chemical properties of seabuckthorn wine (Functional beverage I)............................................................................106-132

Abstract
4.1 Introduction
   4.1.1 Wine components and wine quality
CHAPTER 5

Studies on functional characterization of seabuckthorn wine (Functional beverage I)..........................133-164

Abstract
5.1 Introduction

5.1.1 Biomarkers

5.2 Materials and methods

5.2.1 Chemicals and reagents

5.2.2 Animals

5.2.3 Treatment protocol for phorone induced oxidative stress

5.2.3.1 Estimation of glutathione levels

5.2.3.2 Superoxide dismutase

5.2.3.3 Lipid peroxidation

5.2.3.4 Catalase

5.2.3.5 Glutathione reductase

5.2.3.6 Glutathione peroxidise

5.2.3.7 Glutathione S Transferase

5.2.3.8 Protein estimation

5.2.3.9 Reactive oxygen species (ROS) levels

5.2.4 Treatment protocol for hypercholesterolemia induced by feeding a high cholesterol diet

5.2.4.1 Lipid profile analysis

5.2.4.1.1 Determination of serum total cholesterol

5.2.4.1.2 Determination of high density lipoprotein cholesterol

5.2.4.1.3 Determination of triglycerides

5.2.4.1.4 Determination of low density lipoprotein cholesterol

5.2.5 Statistical analysis

5.3 Results and discussion

5.3.1 Standardization of wine dose

5.3.2 Protective effects of seabuckthorn wine (Functional beverage I) on phorone-induced oxidative stress in male LACA mice

5.3.3 Protective effects of seabuckthorn wine (Functional beverage I) on diet induced hypercholesterolemia in serum of male LACA mice
CHAPTER 6

Evaluation of probiotic efficiency of Lactobacillus plantarum (ATCC 8014) and Lactobacillus rhamnosus (ATCC 7469) for the production of probiotic fortified seabuckthorn beverage (Functional beverage II).............................165-186

Abstract

6.1 Introduction
   6.1.1 Mechanisms of action
   6.1.2 Market survey of probiotics
   6.1.3 Commercial probiotic microorganisms

6.2 Materials and methods
   6.2.1 Antibiotics, chemicals and reagents
   6.2.2 Bacterial strains and preparation of culture
   6.2.3 Probiotic evaluation of Lactobacillus strains

6.3 Results and discussion
   6.3.1 Probiotic evaluation of Lactobacillus strains

6.4 Conclusions

CHAPTER 7

Development and evaluation of properties of probiotic fortified seabuckthorn beverage (Functional beverage II).............................187-218

Abstract

7.1 Introduction

7.2 Materials and methods
   7.2.1 Bacterial strains, ingredients, chemicals and reagents
   7.2.2 Berries collection and extraction of juice
   7.2.3 Development of probiotic fortified seabuckthorn beverage
7.2.4 Viable cell count determination
7.2.5 Estimation of organic acids by HPLC
7.2.6 Estimation of total phenolic content (TPC)
7.2.7 HPLC determination of flavonoids
7.2.8 Sensory evaluation
7.2.9 Proximate analysis
7.2.10 Evaluation of antioxidant activities
7.2.11 Statistical analysis

7.3 Results and discussion
7.3.1 Fortification of seabuckthorn juice sample with different ingredients
7.3.2 Effect of treatment on cell viability
7.3.3 Evaluation of chemical changes of probiotic fortified seabuckthorn beverage during cold storage
7.3.4 Sensory analysis of probiotic fortified seabuckthorn beverage
7.3.5 Nutritional analysis and antioxidant activity of probiotic fortified seabuckthorn beverage

7.4 Conclusions

Overall conclusions and future studies..................................................219-224
Bibliography...............................................................................................225-266
Publications and Presentations.....................................................................267-270
