Acknowledgment

*Everything that has a beginning has an end,* and hence it is coming to an end. Well, this has been a long and at times it felt like a never ending journey. If it was not for writing up the thesis, i would have liked to continue the journey further. This is the time to express my acknowledgment to everyone who helped, guided and encouraged me throughout this period.

I have no words to express my gratitude to my wife Madhura, who has been supportive in so many ways while she let me pursue my Ph.D. So many things were pardoned just because i was doing a Ph.D. and needed my own freedom. Aai and baba have always supported me throughout this period, patiently tolerating and being there for me. Renu and Kunj have always been there to show me the right direction whenever required. My in-laws have also supported me throughout without questioning the uncertainties involved with Ph.D. only because i was willing to accept them. This work would certainly not have been possible without their support.

Well, this work was possible only because of my adviser Dr. Anjali Kshirsagar and i will always be indebted to her giving me the training required to work things out and always encouraging me. Her patience can be gauged from the fact that she has been my project adviser during M.Sc. and then again in this period. In her own way, she encouraged me to pick up many skills, physics as well as computation related, and always gave me freedom to interact with others. I am
sure this training will help me survive the mean world of research which i will shortly be entering.

Prof. G. P. Das, IACS, Kolkata has always been flooded with novel ideas and it was a joint effort with Dr. Anjali which made this thesis possible. I am thankful to him for giving his inputs whenever required. The BARC-DAE fellowship was certainly necessary to get me through this period and i am grateful for it. I thank ICTP, Italy for inviting me under Young Collaborator scheme.

I am grateful to Dr. Stefaan Cottenier, KUL, Leuven for inviting me over to work with him and teaching me many things, including optimally using the WIEN2K package. The work with him introduced me to another field altogether and has definitely broadened my experience.

It is a pleasure to thank my condensed matter teachers, Dr. B. Dey, Dr. R. K. Pathak and Prof. D. G. Kanhere, during M.Sc. who imparted the fundamental training which allowed me to pursue this work. Prof. D. G. Kanhere sorted out many problems related to physics and also problems outside the scope of physics. He was always willing to give advice when approached.

I am thankful to the present and all former Heads of the Department of Physics for allowing me to use the departmental facilities. I also acknowledge the Center for Networking and Computation for the required computer facility.

Finally during these years there were many friends who accompanied me, some of them left earlier and some are still around. Bala had a knack of being around come what may, be it proof reading or partying! Many session with him and Somesh and Hagos gave a "high" of a different kind. Santosh and Indrani always welcomed Madhura and me (us) and always made our Sunday evenings interesting. Sanjay, Shailu, Anuj and Jish always let me into their home to break out of the routine. This was always "cheerful" and i could get back to work refreshed.
Working in the department was also made cheerful due to the presence of our neighbors Bhalchandra, Vaibhav, Chacko. Many a times they helped out with problems related to computers. Himanshu, Vishal and Deepak for keeping the network alive. Abhay and Seema were always willing to invite us for sessions of fabulous biryani. Ranja and Archana were always willing to chat and share information! Archana talked me through the final stages of Ph.D. I also thank Ganesh, Shirshendu, Vivek, Alegaonkar, Hari for sharing miseries of Ph.D. Bhushan for making it possible to visit Dhule. The people from the non-teaching staff in the Dept. have always been very helpful. Many things got done faster because of their help and timely guidance. Pore was ofcourse not from the Dept. but did help with the hardware related problems whenever they came up.

Few friends from distant neighborhood of the Dept., Kavita and Amol who would drop in once in a while always helped. Unfortunately none of the movies seen during these periods were memorable. My friend from graduation Nikhil always made me feel special, among his friends too and always stuck around.

Well, there have been many others who have helped me during this period and i certainly wish to thank them all too. This work would not have been possible without the help from all of them.
