## Chapter 1  INTRODUCTION

1.1 Forms of Noise  

1.2 Types of Signal Degradations  

1.3 Aims of Speech Enhancement  

1.4 Stages in Speech Enhancement  

1.5 Measurement of Speech Enhancement  

1.6 Applications of Speech Enhancement  

1.7 Thesis Statement  

1.8 Contribution of the thesis
Chapter 2  LITERATURE REVIEW  

2.1 Spectral Subtractive Algorithms  
2.2 Statistical-Model Based algorithms  
2.3 Subspace Algorithms  
2.4 Binary Mask Algorithms  
2.5 Filters  
2.6 Speech Non Speech Discrimination  
2.7 Combination of Two Approaches  
2.8 Transforms  
  2.8.1 Discrete Cosine Transform (DCT)  
  2.8.2 Discrete Sine Transform (DST)  
  2.8.3 Discrete Fourier Transform (DFT)  
  2.8.4 Discrete Wavelet Transform (DWT)  
2.9 Research Gaps
Chapter 3  REVIEW OF FILTERING TECHNIQUES  

3.1  Time Domain Filtering  

3.1.1 Comb Filtering  

3.1.2 LPC Based filtering  

3.1.3 Kalman Filtering  

3.1.4 HMM filtering  

3.1.5 Neural Network  

3.2  Transform Domain Filtering  

3.2.1 Magnitude Spectral Subtraction  

3.2.2 Power Spectral Subtraction  

3.2.3 Wiener Filter  

3.2.4 Minimum Mean Square Error Filter  

3.2.5 Log Minimum Mean Square Error  

Chapter 4  METHODOLOGY  

4.1  Problem Statement  

4.2  Motivation  

4.3  Overview
Chapter 5  OBJECTIVE AND SUBJECTIVE MEASURES  70

5.1  Quality vs. Intelligibility  70

5.2  Evaluating Intelligibility of Enhanced Speech  71

5.2.1  Nonsense Syllable Tests  71

5.2.2  Word Tests  72

5.2.3  Phonetically Balanced Word Tests  72

5.2.4  Rhyming Word Tests  72

5.2.5  Sentence Tests  73

5.3  Objective Quality Measures  73

5.3.1  Average Absolute Error  74

5.3.2  Mean Square Error  74

5.3.3  Signal to Noise Ratio  75
