CONTENTS

CHAPTER 1
Introduction 1
Radiation Treatment Delivery Procedure 3
Review of Literature 14
Motivation to the Present Work 22
Plan of Work 24
References 26

CHAPTER 2
Role of Phantoms in Quality Assurance 33
Quality Assurance (QA) 34
Radiotherapy Equipments and their QA 39
   Brachytherapy Machines. 39
   Radiotherapy Simulator. 40
   Treatment Planning Systems. 40
   Cobalt-60 And Linear Accelerator (LA) 42
   Intensity Modulated Radiotherapy 44
Radiation Dosimeters 46
   Film Dosimeter 46
   Thermoluminescent Dosimeter (TLD) 49
   Ionometric Dosimetrs 51
   Chemical Dosimetry 53
Phantoms 54
   History of Phantom Development 57
   Radiation Related Requirements for Phantom 58
   Non-Radiation Requirements of Phantom 59
   General Properties of a Phantom 59
   Safety Requirements of a Phantom 60
References 62
CHAPTER 5

Experimental Setups, Measurements, Results and Discussions

Verification of electron and photon beam parameters of a high energy linear accelerator 135

The accuracy of source positioning and source strength determination using fabricated phantom 143

Calibration of ionization chamber by simultaneous irradiation technique using fabricated phantom 153

Dose measurement of high energy linear accelerator 159

Inhomogeneity correction by TPS 164

References 170

CHAPTER 6

Conclusion 173
