List of Tables

Table 2.1. Information on pollination studies in the Indian subcontinent.

Table 3.1. Tropical dry evergreen forests described in various studies.

Table 4.1. Plant species and aspects studied.

Table 4.2. Number of 5-min floral visitation sampling done per site and plant species.

Table 5.1.1. Details on life form, floral biology of the plant species studied.

Table 5.1.2. Details on sexual and breeding system, pollination mode of plant species.

Table 5.1.3. Summary of fruit set from pollination experiments.

Table 5.1.4. Common floral visitors (frequent pollinators) with the percentage of visits and number of plant species visited.

Table 5.1.5. Plant species studied and percentage visits, diversity and dominance index and number of frequent pollinators (see above table) recorded.

Table 5.1.6. Visitation diversity and rates of all insect visitors and five main pollinators in order of their visitation rates.

Table 5.2.1.1. Number of flowering adults per species in each site.

Table 5.2.1.2. Linear regression between the independent variable adult population size (log N) and the dependent variable, natural fruit set (arc sin transformed).

Table 5.2.1.3. Adult and sapling densities of SC and SI species.

Table 5.2.2.1. Fruit-flower ratio from pollination experiments.

Table 5.2.2.2 Fruit size (mm) from various pollination experiments.

Table 5.2.2.3 Fruit weight (gms) from various pollination experiments.

Table 5.2.2.4 Seed weight (gms) from various pollination experiments.
Table 5.2.3.1. Mean inter-plant distances of the plant species studied.

Table 5.2.3.2 Mean inter-plant distances of self-compatible and self-incompatible species

Table 5.3.1. Natural fruit set, pollinator limitation and fruit set from augmented cross-pollination in self-compatible (SC) and self-incompatible (SI) species.

Table 5.3.2 Pollinator specialization of the study species (R-resource usage, species in bold have specialized pollination mode).

Table 5.3.3. Natural fruit set and pollinator limitation among species with differing pollination modes and compatibility systems.

Table 5.3.4. Levels of fruit set, breeding system, pollinator limitation and pollination mode of the study species.

Table 5.4.1. Comparison of adult and sapling densities in natural and restored sites.

Table 5.4.2. Adult and sapling densities of plant species in natural and restored sites. a- absent, a* species present, but not recorded while sampling 1ha plot.

Table 5.4.3. Pollinator limitation of fruit set in natural and restored forests

Table 5.4.4. Shannon's diversity and dominance index calculated from rarefaction simulation for floral visitors in natural and restored forests.

Table 5.4.5. Sorenson's similarity index weighted by floral visitor abundance (Overlapping species)

Table 5.4.6. Jaccard's similarity index unweighted by floral visitor abundance (shared species).

Table 5.4.7. Pollinator importance index for principal pollinators in 2004.

Table 5.4.8. Pollinator importance index for principal pollinators in 2005.
