List of Tables

Table 1: System suitability results of granisetron hydrochloride ......................................................... 54
Table 2: Precision study (intra-day and inter-day precision) results of granisetron hydrochloride .... 54
Table 3: Recovery results of granisetron hydrochloride ....................................................................... 55
Table 4: LOD, LOQ and linearity results of granisetron hydrochloride ................................................ 56
Table 5: Robustness results of granisetron hydrochloride ................................................................... 57
Table 6: System suitability results of linezolid ..................................................................................... 60
Table 7: Intra-day and inter-day precision results of linezolid ................................................................ 61
Table 8: Recovery results of linezolid ................................................................................................... 61
Table 9: LOD, LOQ and linearity results of linezolid ............................................................................. 62
Table 10: Robustness results of linezolid ............................................................................................. 63
Table 11: Linearity, LOD and LOQ results of linezolid in plasma .......................................................... 66
Table 12: Intra assay and inter assay variation result of linezolid in plasma ........................................... 68
Table 13: Stability of Linezolid in Rabbit Plasma .................................................................................. 68
Table 14: System suitability results of memantine hydrochloride ....................................................... 72
Table 15: Intra-day and inter-day precision results of memantine hydrochloride .............................. 72
Table 16: Recovery results of memantine hydrochloride .................................................................... 73
Table 17: LOD, LOQ and linearity results of memantine hydrochloride .............................................. 74
Table 18: Robustness results of memantine hydrochloride ................................................................ 75
Table 19: Comparisons of validation parameter of granisetron hydrochloride, linezolid and memantine hydrochloride ............................................................................................................ 76
Table 20: Organoleptic and physico-chemical properties of granisetron hydrochloride .................. 77
Table 21: Drug-excipients compatibility study results of granisetron hydrochloride .......................... 78
Table 22: Organoleptic and physico-chemical properties of linezolid ................................................... 81
Table 23: Drug-excipients compatibility study results of linezolid ........................................................ 82
Table 24: Organoleptic and physico-chemical properties of memantine hydrochloride .................... 85
Table 25: Drug-excipients compatibility study results of memantine hydrochloride .......................... 86
Table 26: Comparative summary of pre-formulation parameters of granisetron hydrochloride, linezolid and memantine hydrochloride ...................................................................................... 88
Table 27: Criteria for film Separatability with code ............................................................................... 91
Table 28: Formulation composition of trial batches of placebo mouth dissolving film ....................... 93
Table 29: Experimental variables and levels of Plackett Burman design ............................................ 96
Table 30: Outline and observed responses of Plackett Burman design .............................................. 96
Table 31: Mechanical properties of film ............................................................................................ 101
Table 32: Formulation of different sweetener along with evaluation parameters ........................................... 105
Table 33: Formulation of mouth dissolving film of granisetron hydrochloride prepared using Lycoat and PEG-400 .......................................................................................................................... 107
Table 34: Independent Variables in design and composition of MDF prepared using Lycoat and PEG-400 .............................................................................................................................................. 107
Table 35: Design of experiment with result of dependent variables prepared for MDF prepared using Lycoat and PEG-400 .............................................................................................................................................. 108
Table 36: Physical evaluation of mouth dissolving film formulation prepared using Lycoat and PEG-400 .............................................................................................................................................. 109
Table 37: ANOVA results (p value) of the effect of independent variables on response variables for MDF prepared using Lycoat and PEG-400 .............................................................................................................................................. 110
Table 38: Comparison between predicted and experimental values of checkpoint batches for MDF prepared using Lycoat and PEG-400 .............................................................................................................................................. 111
Table 39: Optimized batch (OB) formulation for film containing granisetron hydrochloride prepared using Lycoat and PEG-400 .............................................................................................................................................. 113
Table 40: Evaluation of physical and chemical stability of optimized batch (OB)-using Lycoat RS720 and PEG-400 .............................................................................................................................................. 114
Table 41: Formulation of mouth dissolving film of granisetron hydrochloride prepared using pullulan and PG ........................................................................................................................................ 116
Table 42: Independent Variables in design and composition of MDF prepared using pullulan and PG .................................................................................................................................................... 117
Table 43: Design of experiment with result of dependent variables of MDF prepared using pullulan and PG ........................................................................................................................................ 118
Table 44: Physical characterization of design of experimental batches of MDF prepared using pullulan and PG ........................................................................................................................................ 119
Table 45: ANOVA (p value) of the effect of independent variables on response variables of MDF prepared using pullulan and PG ........................................................................................................................................ 120
Table 46: Comparison between predicted and experimental values of checkpoint batches of MDF prepared using pullulan and PG ........................................................................................................................................ 121
Table 47: Optimized batch (OB) formulation for film containing granisetron hydrochloride prepared using pullulan and PG ........................................................................................................................................ 122
Table 48: Evaluation of physical and chemical stability of optimized batch (OB)-using pullulan and PG .................................................................................................................................................... 123
Table 49: Drug release of mouth dissolving film and marketed tablet of granisetron hydrochloride
Table 50: Formulation of memantine hydrochloride mouth dissolving film ........................................... 126
Table 51: Result of Evaluation parameter of MDF of memantine hydrochloride ...................................... 127
Table 52: Evaluation of physical and chemical stability of MDF of memantine hydrochloride ............ 128
Table 53: Drug release of mouth dissolving film and marketed tablet of memantine hydrochloride ...... 129
Table 54: Formulation of linezolid mouth dissolving film .................................................................. 130
Table 55: Result of Evaluation parameter of MDF of linezolid ............................................................. 131
Table 56: Formulation of linezolid oral soft gel prepared using gellan gum as gelling agent ............. 139
Table 57: Physical and chemical evaluation of carbopol 934 gel batches ........................................... 139
Table 58: % drug release of carbopol 934 batches ............................................................................... 140
Table 59: Stability study of optimized batches prepared using carbopol 934 packed in triple laminated aluminum sachet ............................................................... 140
Table 60: Formulation of oral soft gel of linezolid prepared using gellan gum ..................................... 142
Table 61: Independent variables in CCD and formulation of OSG prepared using gellan gum ........ 143
Table 62: Design of experiment with result of dependent variables for OSG prepared using gellan gum ............................................................................................................................................. 144
Table 63: Physical evaluation of experimental batches for OSG prepared using gellan gum .......... 144
Table 64: ANOVA results (p value) of the effect of independent variables on response variables for OSG prepared using gellan gum ............................................................................................................................................. 145
Table 65: Optimized batch of oral soft gel of linezolid prepared using OSG ....................................... 147
Table 66: Stability study of optimized batches of linezolid oral soft gel prepared using gellan gum packed in triple laminated aluminum sachet ........................................................................ 148
Table 67: % Drug release of oral soft gel and marketed dispersible tablet of linezolid ....................... 150
Table 68: Formulation of oral soft gel of granisetron hydrochloride .................................................. 152
Table 69: Evaluation parameters of oral soft gel of granisetron hydrochloride .................................. 153
Table 70: Stability study result of granisetron hydrochloride oral soft gel ......................................... 154
Table 71: Formulation of oral soft gel of memantine hydrochloride .................................................... 156
Table 72: Evaluation parameters of oral soft gel of memantine hydrochloride ................................... 157
Table 73: Stability study result of memantine hydrochloride oral soft gel ....................................... 158
Table 74: % Drug release of MDF and OSG of granisetron hydrochloride .......................................... 160
Table 75: % Drug release of MDF and OSG of memantine hydrochloride .......................................... 163
Table 76: Microbial testing of mouth dissolving film of granisetron hydrochloride ......................... 170
Table 77: Microbial testing of mouth dissolving film of memantine hydrochloride ......................... 171
Table 78: Microbial testing of oral soft gel of linezolid ...................................................................... 173
Table 79: Peak load and peak AUC of texture analyzer study ............................................................ 173
Table 80: Mean plasma concentration of linezolid in rabbit plasma ................................................. 178
Table 81: Comparison of pharmacokinetics parameters of linezolid between reference (Marketed Dispersible Tablet) and sample (Oral soft gel) in Rabbit plasma (N=3)........................................ 179
Table 82: Code for different parameters of taste and color acceptability evaluation ...................... 181
Table 83: Result of taste acceptability study of MDF of granisetron hydrochloride in human volunteers ................................................................................................................................... 183
Table 84: Result of taste and colour acceptability study of MDF of memantine hydrochloride in human volunteers ...................................................................................................................... 184
Table 85: Taste acceptability study of oral soft gel of linezolid in human volunteers ....................... 185
Table 86: Comparison of both formulations approach for granisetron hydrochloride, memantine hydrochloride and linezolid ........................................................................................................ 192
Table 87: Comparison of best formulations with market product for granisetron hydrochloride, memantine hydrochloride and linezolid ................................................................. 193
List of Figures

Figure 1: UV Spectrum of Granisetron hydrochloride (10 µg/ml) ........................................................ 52
Figure 2: Chromatograms of Granisetron Hydrochloride Standard ........................................................ 53
Figure 3: Linearity Calibration Plot of Granisetron Hydrochloride ........................................................... 56
Figure 4: UV Spectrum of Linezolid at Different Concentration ............................................................ 59
Figure 5: Typical Chromatograms of Linezolid Standard ......................................................................... 60
Figure 6: Calibration Curve of Linezolid .................................................................................................. 63
Figure 7: Calibration Curve of Linezolid in Spike Plasma Sample ............................................................ 67
Figure 8: Chromatogram of Standard Linezolid Spiked in Plasma (900 ng/ml) ....................................... 67
Figure 9: Typical Chromatograms of Memantine Hydrochloride Standard ........................................... 70
Figure 10: Calibration Curve of memantine Hydrochloride ..................................................................... 74
Figure 11: FTIR Spectra of Pure Granisetron Hydrochloride ................................................................. 79
Figure 12: FTIR Spectra of GH+ Pullulan + PG + All Other Proposed Excipients ................................... 80
Figure 13: FTIR Spectra of GH+ Lycoat RS 720+PEG + all other proposed excipients ........................... 80
Figure 14: FTIR Spectra of pure Linezolid ............................................................................................... 83
Figure 15: FTIR Spectra of Linezolid + Carbopol 934 + all other proposed excipients ............................ 84
Figure 16: FTIR Spectra of Linezolid + Gellan gum+ all other proposed excipients ............................... 84
Figure 17: FTIR Spectra of pure Memantine Hydrochloride ..................................................................... 87
Figure 18: FTIR Spectra of MH+ Lycoat RS 720 + PEG 400 + all other proposed excipients ................. 87
