Acknowledgements

Let me take this opportunity to express my deepest sense of gratitude to Dr. M. Haridas, my guide and co-guide, Dr. G. Muraleedhara Kurup for suggesting this topic as my research work. They have been extremely supportive of whatever endeavour I made and gave me complete independence to design and execute experiments.

I am extremely grateful to Dr. Shankar Shashidhar, Director, School of Biosciences for his relentless effort and special caring in completing this work. Actually, no word of thanks would do justice to what he has done for me.

Thanks are due to all the teaching and non-teaching staff of School of Biosciences, especially to Mr. Bose, technical officer of this department.

I must thank Dr. Sugunan, Scientist, RGCBT, Thiruvananthapuram whose directions helped me to be in Prof. Balaram’s group of Indian Institute of Science, Bangalore for nearly three months. I consider it an honour to have carried out at least some part of my doctoral research under his supervision. I am particularly thankful to Prof. Balaram for his untiring help and support without which this work could not have taken shape.

My stay in the lab as well as in the campus for almost five years has been extremely pleasant, beneficial and memorable. During this period, I have been associated with a large number of colleagues. I would like to thank all of them for being very helpful, particularly to my lab-mates, Arun, Jinsu, Sreekumar, Jincy, Manoj . . . then Hari, Jacob . . . Even though, I have to specially mention Elizabeth for her timely help with which I could successfully complete this work.

My sincere thank are all to Mr. Robin and all other members of M/s Copy Write, Etumanoor for formatting this thesis.

I would like to conclude with thanking my dear parents and other members of my family for their constant support and patience.

I acknowledge the financial assistance from Centre for Scientific and Industrial Research (CSIR), India.

Sudarslal S.
