Chapter-1: Review of Literature	1-33
1.1 General Introduction	
1.1.1 s-Triazine	
1.1.1.1 Introduction	
1.1.1.2 Synthetic aspects of s-triazine derivatives	
1.1.1.3 Biological aspects s-triazine derivatives	
1.1.2 Chalcones	
1.1.2.1 Introduction	
1.1.2.2 Synthetic aspects of chalcones	
1.1.2.3 Biological aspects of chalcones	
1.1.3 Simazine & Atrazine	
1.2 Brief outline of present work	
1.3 References	
Chapter-2: Preparation of Intermediates	34-65
2.1 General Introduction	
2.1.1 Importance of chalcones in the organic synthesis	
2.1.2 Applications of chalcones in the organic synthesis	
2.2 Present Work	
2.3 Results and Discussion	
2.4 Spectral data interpretation for the elucidation of structure of compounds	
2.5 Mechanism of formation of compounds	
2.6 Experimental section	
2.7 References	
Chapter-3: Synthesis of pyrazoles & isoxazoles substituted chalcones of s-triazines	66-89
3.1 General Introduction	
3.1.1 Pyrazoles	
3.1.1.1 Biological aspects of pyrazoles	
3.1.1.2 Synthetic aspects of pyrazoles	

3.1.2	Isoxazoles	
3.1.1.1	Biological aspects of Isoxazoles	
3.1.1.2	Synthetic aspects of Isoxazoles	
3.2	Present Work	
3.3	Results and Discussion	
3.4	Spectral data interpretation for the elucidation of structure of compounds	
3.5	Mechanism of formation of compounds	
3.6	Experimental section	
3.7	References	

Chapter-4: Pyrimidine substituted derivatives of s-triazines **90-116**

4.1	General Introduction	
4.1.1	Biological aspects of pyrimidines	
4.1.2	Synthetic aspects of pyrimidines	
4.2	Present Work	
4.3	Results and Discussion	
4.4	Spectral data interpretation for the elucidation of structure of the compounds	
4.5	Mechanism of formation of compounds	
4.6	Experimental section	
4.7	References	

Chapter-5: Evaluation of antimicrobial & anti-inflammatory activity of synthesized compounds

117-140

5.1	General Introduction	
5.2	Anti-bacterial studies	
5.2.1	Bacterial strains	
5.2.2	Different controls	
5.2.3	Anti-bacterial activity of compounds	
5.3	Methodology	
5.4	Anti-fungal studies	
5.4.1	Fungal strains	
5.4.2	Anti-fungal activity of compounds
