LIST OF TABLES

Table 1.1 Oxides of various glasses and concrete pozzolana
Table 1.2 Essential performance properties and limits for ground glass pozzolana
Table 4.1 Physical properties of Ordinary Portland Cement (IS: 8112-1989)
Table 4.2 Sieve analysis of fine aggregate (IS: 383-1970)
Table 4.3 Physical properties of fine aggregate (IS: 2386-1963)
Table 4.4 Sieve analysis of coarse aggregate (IS: 383-1970)
Table 4.5 Physical and mechanical properties of coarse aggregate (IS: 2386-1963)
Table 4.6 Oxide content for waste glass powder
Table 5.1 Workability test results when cement is replaced by waste glass powder in different proportions
Table 5.2 Initial setting and final setting time results of concrete when cement is replaced by waste glass powder in different proportions.
Table 5.3 Compressive strength test results when cement is replaced by waste glass powder
Table 5.4 Overall results of compressive strength
Table 5.5 Tensile strength test results when cement is replaced by waste glass powder
Table 5.6 Overall results of tensile strength
Table 5.7 Flexural strength test results when cement is replaced by waste glass powder
Table 5.8 Overall results of flexural strength
Table 5.9 Impact strength test results when cement is replaced by waste glass powder
Table 5.10 Overall results of impact energy
Table 6.1 Compressive strength test results without subjecting to alternate wetting & drying
Table 6.2 Compressive strength test results when subjected to alternate wetting & drying
Table 6.3 Overall results of compressive strength
Table 6.4 Tensile strength test results without subjecting to alternate wetting and drying
Table 6.5 Tensile strength test results when subjected to alternate wetting and drying
Table 6.6 Overall results of tensile strength with and without subjecting to alternate wetting and drying
Table 6.7 Flexural strength test results without subjecting to alternate wetting and drying
Table 6.8 Flexural strength test results when subjected to alternate wetting and drying
Table 6.9 Overall results of flexural strength with and without subjecting to alternate wetting and drying
Table 6.10 Impact strength test results without subjecting to alternate wetting and drying
Table 6.11 Impact strength test results when subjected to alternate wetting and drying
Table 6.12 Overall results of impact energy with and without subjecting to alternate wetting and drying
Table 6.13 Compressive strength test results without subjecting to high temperature
Table 6.14 Compressive strength test results when subjected to high temperature of 200°C
Table 6.15 Compressive strength test results when subjected to high temperature of 500°C
Table 6.16 Overall results of compressive strength with and without subjecting to high temperature
Table 6.17 Tensile strength test results without subjecting to high temperature
Table 6.18 Tensile strength test results when subjected to high temperature of 200°C
Table 6.19 Tensile strength test results when subjected to high temperature of 500°C
Table 6.20 Overall results of tensile strength with and without subjecting to high temperature
Table 6.21 Flexural strength test results without subjecting to high temperature
Table 6.22 Flexural strength test results when subjected to high temperature of 200°C
Table 6.23 Flexural strength test results when subjected to high temperature of 500°C
Table 6.24 Overall results of flexural strength with and without subjecting to high temperature
Table 6.25 Impact strength test results without subjecting to high temperature
Table 6.26 Impact strength of SFRC when subjected to 200°C temperature for 12 hours
Table 6.27 Impact strength of SFRC when subjected to 500°C temperature for 12 hours
Table 6.28 Overall results of impact strength
Table 6.29 Compressive strength test results without subjecting to freezing
Table 6.30 Compressive strength test results when subjected to freezing
Table 6.31 Overall results of compressive strength
Table 6.32 Tensile strength test results without subjecting to freezing
Table 6.33 Tensile strength test results when subjected to freezing
Table 6.34 Overall results of tensile strength
Table 6.35 Flexural strength test results without subjecting to freezing
Table 6.36 Flexural strength test results when subjected to freezing
Table 6.37 Overall results of flexural strength
Table 6.38 Impact strength test results without subjecting to freezing
Table 6.39 Impact strength test results when subjected to freezing for 90 days
Table 6.40 Overall results of impact energy with and without subjecting to freezing
Table 6.41 Compressive strength test results of concrete without subjecting to chloride attack (Age of concrete=90 days)
Table 6.42 Compressive strength and chloride content of concrete when subjected to chloride attack for 30 days
Table 6.43 Overall results of chloride content and compressive strength (Age of concrete=90 days)
Table 6.44 Compressive strength test results of concrete without subjecting to chloride attack (Age of concrete=150 days)
Table 6.45 Compressive strength and chloride content of concrete when subjected to chloride attack for 90 days
Table 6.46 Overall results of chloride content and compressive strength (Age of concrete=150 days)
Table 6.47 Compressive strength test results of concrete without subjecting to sulphate attack (Age of concrete=90 days)
Table 6.48 Compressive strength test results when subjected to sulphate attack for 30 days
Table 6.49 Overall results of compressive strength with and without subjecting to sulphate attack for 30 days
Table 6.50 Compressive strength test results of concrete without subjecting to sulphate attack (Age of concrete=150 days)
Table 6.51 Compressive strength test results when subjected to sulphate attack for 90 days
Table 6.52 Overall results of compressive strength with and without subjecting to sulphate attack for 90 days
Table 7.1 Slump flow test of SCC with different percentage replacement of cement by waste glass powder
Table 7.2 Slump flow with J-Ring test of SCC with different percentage replacement of cement by waste glass powder
Table 7.3 Orimet test results of SCC with different percentage replacement of cement by waste glass powder. (With J-Ring)
Table 7.4 V-funnel test results of SCC with different percentage replacement of cement by waste glass powder
Table 7.5 L-box test results of SCC with different percentage replacement of cement by waste glass powder
Table 7.6 U-box test results of SCC with different percentage replacement of cement by waste glass powder
Table 7.7 Overall results of flow characteristics of self-compacting concrete
Table 7.8 Compressive strength test results when cement is replaced by waste glass powder
Table 7.9 Overall results of compressive strength of SCC
Table 7.10 Tensile strength test results of SCC
Table 7.11 Overall results of tensile strength of SCC
Table 7.12 Flexural strength test results of S.C.C when cement is replaced by waste glass powder
Table 7.13 Overall results of flexural strength of SCC
Table 7.14 Impact strength test results of SCC
Table 7.15 Overall results of impact energy of SCC
Table 8.1 Workability test results of SFRC when cement is replaced by waste glass powder in different proportions
Table 8.2 Initial setting time and final setting time results of concrete when cement is replaced by waste glass powder in different proportions
Table 8.3 Compressive strength test results of SFRC
Table 8.4 Overall results of compressive strength
Table 8.5 Predicted and observed values of compressive strength of SFRC
Table 8.6 Tensile strength test results of SFRC
Table 8.7 Overall results of tensile strength
Table 8.8 Predicted and observed values of tensile strength of SFRC
Table 8.9 Flexural strength test results of SFRC
Table 8.10 Overall results of flexural strength
Table 8.11 Predicted and observed values of flexural strength of SFRC
Table 8.12 Impact strength test results of SFRC
Table 8.13 Overall results of impact strength
Table 8.14 Predicted and observed values of flexural strength of SFRC
Table 9.1 Compressive strength test results of SFRC without subjecting to temperature
Table 9.2 Compressive strength test results of SFRC when subjected to 300°C temperature for 12 hours
Table 9.3 Compressive strength test results of SFRC when subjected to 550°C temperature for 12 hours
Table 9.4 Overall results of compressive strength
Table 9.5 Tensile strength test results of SFRC without subjecting to temperature
Table 9.6 Tensile strength test results of SFRC when subjected to 300°C temperature for 12 hours
Table 9.7 Tensile strength test results of SFRC when subjected to 550°C temperature for 12 hours
Table 9.8 Overall results of tensile strength
Table 9.9 Flexural strength test results of SFRC without subjecting to temperature
Table 9.10 Flexural strength test results of SFRC when subjected to 300°C temperature for 12 hours
Table 9.11 Flexural strength test results of SFRC when subjected to 550°C temperature for 12 hours
Table 9.12 Overall results of flexural strength
Table 9.13 Impact strength test results of SFRC without subjecting to temperature
Table 9.14 Impact strength of SFRC when subjected to 300°C temperature for 12 hours
Table 9.15 Impact strength of SFRC when subjected to 550°C temperature for 12 hours
Table 9.16 Overall results of impact strength
Table 9.17 Compressive strength test results without subjecting to freezing and thawing
Table 9.18 Compressive strength test results when subjected to freezing and thawing
Table 9.19 Overall results of compressive strength
Table 9.20 Tensile strength test results without subjecting to freezing and thawing
Table 9.21 Tensile strength test results when subjecting to freezing and thawing
Table 9.22 Overall results of tensile strength
Table 9.23 Flexural strength test results without subjecting to freezing and thawing
Table 9.24 Flexural strength test results when subjected to freezing and thawing
Table 9.25 Overall results of flexural strength
Table 9.26 Impact strength test results without subjecting to freezing and thawing
Table 9.27 Impact strength test results when subjected to freezing and thawing
Table 9.28 Overall results of impact strength
Table 9.29 Compressive strength of SFRC without subjecting to chloride attack
Table 9.30 Compressive strength and chloride content of SFRC when subjected to chloride attack
Table 9.31 Overall results of chloride content and compressive strength
Table 9.32 Tensile strength of SFRC without subjecting to chloride attack
Table 9.33 Tensile strength and chloride content of SFRC when subjected to chloride attack
Table 9.34 Overall results of chloride content and tensile strength
Table 9.35 Flexural strength of SFRC without subjecting to chloride attack
Table 9.36 Flexural strength and chloride content of SFRC when subjected to chloride attack
Table 9.37 Overall results of chloride content and flexural strength
Table 9.38 Impact strength of SFRC without subjecting to chloride attack
Table 9.39 Impact strength and chloride content test results of SFRC when subjected to chloride attack
Table 9.40 Overall results of chloride content and impact strength
Table 9.41 Compressive strength of SFRC without subjecting to chloride attack
Table 9.42 Compressive strength of SFRC when subjected to sulphate attack
Table 9.43 Overall results of compressive strength
Table 9.44 Tensile strength of SFRC without subjecting to sulphate attack
Table 9.45 Tensile strength of SFRC when subjected to sulphate attack
Table 9.46 Tensile strength of SFRC when subjected to sulphate attack
Table 9.47 Flexural strength of SFRC when subjected to sulphate attack
Table 9.48 Overall results of flexural strength
Table 9.49 Impact strength of SFRC without subjecting to sulphate attack
Table 9.50 Impact strength of SFRC when subjected to sulphate attack
Table 9.51 Overall results of impact strength
Table 9.52 Compressive strength test results of SFRC without subjecting to sulphate attack
Table 9.53 Compressive strength test results of SFRC when subjected to sulphate attack
Table 9.54 Compressive strength test results of SFRC when subjected to sulphate attack with alternate wetting and drying cycles
Table 9.55 Overall results of compressive strength
Table 9.56 Tensile strength test results of SFRC without subjecting to sulphate attack
Table 9.57 Tensile strength test results of SFRC when subjected to sulphate attack
Table 9.58 Overall results of tensile strength
Table 9.59 Flexural strength test results of SFRC without subjecting to sulphate attack
Table 9.60 Flexural strength test results of SFRC when subjected to sulphate attack
Table 9.61 Overall results of flexural strength
Table 9.62 Impact strength test results of SFRC without subjecting to sulphate attack
Table 9.63 Impact strength test results of SFRC when subjected to sulphate attack
Table 9.64 Overall results of impact strength
Table 9.65 Compressive strength test results of SFRC without subjecting to acidic attack
Table 9.66 Compressive strength test results of SFRC when subjected to acidic attack of pH= 1 for 90 days
Table 9.67 Compressive strength test results of SFRC when subjected to acidic attack of pH= 3 for 90 days
Table 9.68 Overall results of compressive strength
Table 9.69 Tensile strength test results without subjecting to acidic attack
Table 9.70 Tensile strength test results when subjected to acidic attack of pH= 1 for 90 days
Table 9.71 Tensile strength test results when subjected to acidic attack of pH= 3 for 90 days
Table 9.72 Overall results of tensile strength
Table 9.73 Flexural strength test results without subjecting to acidic attack
Table 9.74 Flexural strength test results when subjected to acidic attack of pH= 1 for 90 days
Table 9.75 Flexural strength test results when subjected to acidic attack of pH= 3 for 90 days
Table 9.76 Overall results of flexural strength
Table 9.77 Impact strength test results without subjecting to acidic attack
Table 9.78 Impact strength test results when subjected to acidic attack of pH=1 for 90 days
