## List of Tables

Table 2.1: Qualitative versus quantitative research

Table 3.1: Modes of COCOMO I

Table 3.2: Cost drivers of COCOMO II

Table 3.3: Early Cost Drivers with its weighting factors

Table 3.4: The Wideband Delphi technique [5] [33]

Table 3.5: CMM Levels

Table 5.1: Interview Demographics

Table 6.1: Company size vs. Training program

Table 6.2: Result of Chi Square test

Table 6.3: Symmetric Measure

Table 6.4: Company size vs. Risk buffer

Table 6.5: Result of Chi-Square Test

Table 6.6: Symmetric measure

Table 6.7: Company size vs. Review of estimated cost

Table 6.8: Chi-Square Test

Table 6.9: Symmetric Measure

Table 6.10: Nature of Projects vs. Company Size

Table 7.1: Data Sets

Table 8.1: Fuzzy Variable range for maturity

Table 8.2: Fuzzy variable range for Fault tolerance
Table 8.3: Fuzzy variable range for Recoverability
Table 8.4: Fuzzy variable range for Reliability
Table 8.5: Fuzzy variable range for Understandability
Table 8.6: Fuzzy variable range for Learnability
Table 8.7: Fuzzy variable range for Operability
Table 8.8: Fuzzy variable range for output usability
Table 8.9: Fuzzy variable range for input variable for Analyzability
Table 8.10: Fuzzy variable range for input Changeability
Table 8.11: Fuzzy variable range for input Stability
Table 8.12: Fuzzy variable range for Testability
Table 8.13: Fuzzy variable range for Adaptability
Table 8.14: Fuzzy variable range for output Maintainability
Table 8.15: Fundamental Scale (1 to 9)
Table 8.16: Value of Random Index
Table 8.17: Pairwise Comparison Matrix for Main quality attributes
Table 8.18: Pairwise Comparison Matrix for sub-main quality attributes
Table 8.19: Evaluation table
Table 8.20: Calculating the level of effectiveness of software quality model based on the sub characteristics of software model
