Chapter-3

Objectives and Hypotheses
Research questions

The main research questions were:

1. Does Socio-Demographic variables (Gender, Level of Education, Income, Location of Residence, Type of College, Religion, Place of Stay and Sleep) correlate on Subjective Well-Being of Adolescents?

Objectives

The present study was carried out with the following objectives

1. To find out the gender difference on Subjective Well-being of Adolescents.

2. To find out the significant difference in the level of education (Class) on Subjective Well-being of Adolescents.

3. To find out the significant difference in Income on Subjective Well-being of Adolescents.

4. To find out the significant difference in the location of residence on Subjective Well-being of Adolescents.

5. To find out the significant difference in type of college on Subjective Well-being of Adolescents.
6. To find out the significant difference in religion on Subjective Well-being of Adolescents.

7. To find out the significant difference in place of stay on Subjective Well-being of Adolescents.

8. To find out the significant difference in Sleep on Subjective Well-being of Adolescents.

Hypotheses

The study aimed at testing the following hypothesis.

1. There will be a gender difference on Subjective Well-being of Adolescents

2. There will be a significant difference in the level of education on Subjective Well-being of Adolescents.

3. There will be significant difference in the Income on Subjective Well-being of Adolescents.

4. There will be significant difference in the location of residence on Subjective Well-being of Adolescents.

5. There will be significant difference in type of college on Subjective Well-being of Adolescents.
6. There will be significant difference in religion on Subjective Well-being of Adolescents.

7. There will be significant difference in place of stay on Subjective Well-being of Adolescents.

8. There will be significant difference in Sleep on Subjective Well-being of Adolescents.
