AIMS & OBJECTIVES
AIMS AND OBJECTIVES:

1. To study the microbial flora in hospitalized neonates and to find out the rate of infection in them.

2. To study the microbial flora associated with infected burns in hospitalized patients and the infection rate amongst them.

3. To study the significance of the nursery and burns infection in relation to hospital environment.

4. To study the antibiogram of bacterial isolates.

5. To study and correlate the epidemiological markers and their significance in nursery and burn infections.

6. To study the immunoglobulin levels and C₃ levels in these infections and to compare immunoglobulin levels and C₃ level in healthy controls.

7. To compare the rate of nosocomial infection with other studies carried out in India and abroad.
