

## LIST OF TABLES

TABLE NO	TITLE	PAGE NO
1.1	Resistivity of different metals	9
1.2	Alpha( $\alpha$ ) and Beta ( $\beta$ ) for Lumped and distributed network	14
1.3	Forecast technology parameter	20
1.4	Technology nodes from 1999 - 2019	20
3.1	Run Length Encoding (RLE) example	57
3.2	Bit assignment based on frequency of the character	59
3.3	Arithmetic coding model sample symbol ranges	60
3.4	Dictionary for lempel Ziv algorithm	68
3.5	Lookup table for text characters	70
3.6	Analysis of BPC for different compression techniques	74
3.7	Performance evaluation of huffman coding	77
3.8	Performance evaluation of arithmetic coding	77
3.9	Performance evaluation of run length encoding	78
3.10	Performance evaluation of simple byte compression	78
3.11	Saving percentage of different compression techniques	80
4.1	Energy Transition analysis for self capacitance	86
4.2	Energy transition analysis for coupling capacitance	87
4.3	Three bit representation of control signal	90

<b>TABLE NO</b>	<b>TITLE</b>	<b>PAGE NO</b>
4.4	Transition count for input data $B_1^k$	95
4.5	Transition count for input data $B_2^k$	97
4.6	Transition count for input data $B_3^k$	98
4.7	Comparison of transition count in multi coding technique	99
4.8	Percentage of energy saved in multi coding technique	100
4.9	Comparison of energy saving percentage of multi coding technique with other existing coding techniques	101
6.1	Parameters comparison for different CMOS logic design	135
6.2	Transistor count in different CMOS logic design	136
6.3	Power dissipation for different CMOS logic design	138
6.4	Propagation delay for different CMOS logic design	139
6.5	Area of different CMOS logic design	140
