ACKNOWLEDGEMENT

A research project is never the work of anyone alone. The contributions of many different people, in their different ways, have made this possible. This thesis is the end of my journey in obtaining my Ph.D. This thesis has been kept on track and been seen through to completion with the support and encouragement of numerous people including my well wishers, my friends, colleagues and various institutions. I take this opportunity to thank all those people who made this thesis possible and an unforgettable experience for me. At the end of my thesis, it is a pleasant task to express my thanks to all those who contributed in many ways to the success of this study and made it an unforgettable experience for me. I would like to express my indebtedness and extend appreciation to all those who have been selflessly involved during the course of this work.

First and foremost I want to thank my guide Dr. S. S. Kolekar. It has been an honour to be his Ph.D. student. His supervision, advice, and support for the possibility to work in the challenging area of pesticide residue analysis and food safety made my experience productive and stimulating. Thanks for your valuable guidance, encouragement and suggestions which formed the basis for framing and accomplishing this work. Thanks for providing the encouragement, sound advice, good teaching and appropriate direction. The encouragement helped me to not only grow as an experimentalist and a chemist but also as an independent thinker.

It is difficult to state my gratitude to my co-guide, Prof. M. A. Anuse. His encouragement, suggestions and efforts to accomplishing this work, helped me throughout the tenure of this work. Without his guidance, I would not be able to put the topic together. The experience has been an interesting and rewarding one.

I take this opportunity to thank Prof. M. B. Deshmukh, Coordinator for providing me the opportunity to carry out this work successfully. I would like to thank Department of Agrochemicals and Pest Management, Shivaji University Kolhapur, and especially the members of my doctoral committee for their input, valuable discussions and suggestions.

I express my deep and sincere gratitude to Dr. K. Banerjee, ICAR National Fellow and Senior Scientist, National Research Centre for Grapes, Pune. His
generous support, encouragement, painstaking observations and suggestions have provided a good basis for the study. His vision and directions towards newer and innovative research views, as well as the constant quest of exploring the frontier of this filed were instrumental in developing my scientific and analytical temperament. Thanks are due to him for the thought provoking discussions and the undying inspirational talks. I owe a great deal of appreciation and gratitude towards him and I doubt that I will ever be able to convey it fully.

Thank you doesn't seem sufficient but it is acknowledged with appreciation, the contributions of Ms. Soma Dasgupta, Research Associate, National Referral Laboratory, NRC for Grapes and Mr. V. S. Kolekar, Coordinator, National Horticultural Mission, for useful discussions and the moral encouragement.

I am greatly indebted to Dr. P.G. Adsule, Director, NRC for Grapes, Pune for providing me the opportunity to work in the state-of-the-art facility at the National Referral Laboratory. The exposure to the myriad of technical support has been a major contributor in shaping this work. I express my deepest regards to all scientists at NRC Grapes.

For this research, field trials were an important component. Many people helped with this, for which I would like to thank them wholeheartedly. I express my sincere thanks to all the pomegranate farmers and their families who provided their valuable farms for pesticide dissipation and monitoring studies. Without their generosity there would be nothing to work with. Without the support of Dr. Sangram Patil and Mr. Sameer Wagh who selflessly helped me with the framing of the field trials, planning and executing the spraying schedules, sample collection and processing the work would have been difficult to accomplish. Their enthusiastic involvement throughout the process has been truly encouraging. I also take this opportunity to express my thanks to all past, present and former colleagues of the National Referral Laboratory, NRC for Grapes, Pune for the excellent working environment and their supportive nature. It was a pleasure to work together.
I also wish to thank my research colleagues from Department of Chemistry, Shivaji University, Kolhapur for the extensive co-operation. In particular the timely support extended by Dr. Prathmesh Salvi is greatly appreciated.

Most of the results described in this thesis would not have been obtained without a close collaboration with few laboratories. Thanks are due to Mr. Sunil Kulkarni and Mr. Chandrasekar Kandaswamy, Agilent Technologies, Bangalore for the interesting collaboration.

It’s my fortune to gratefully acknowledge the support of some special individuals. I would like to thank my parents for their unconditional emotional support and understanding throughout my degree. In particular, the patience and understanding shown by my mother (Mrs. Suvarna Utture), father (Mr. Chandrakant Utture) and other family members during the years are gratefully appreciated. I owe everything to them. Words fail me to express my admiration to my wife, Pooja for her support. She was always beside me during the happy and hard moments to push me and motivate me.

Besides this, several people have knowingly and unknowingly helped me in the successful completion of this project. I owe my sincere most thanks to all of you.

Sagar Chandrakant Utture
