ACKNOWLEDGEMENT

Ever since my registration as a part-time researcher with the University I have been devoting a substantial measure of my physical and intellectual energies to the task at hand. The subject matter of my work has been far removed from my day-to-day responsibilities and duties, calling for that much more of multitasking and compartmentalized thinking. I am indeed fortunate to have been working with a great number of people whose contribution in assorted ways to the research and the making of the thesis deserve special mention. It is a pleasure to convey my gratitude to them all in my humble acknowledgment.

In the first place I would like to record my gratitude to Prof. Dr. Lalu Mangal, who guided the research with his supervision and advice from the very early stage of this research as well as gave me extraordinary insights throughout the course of the work. Above all and the most needed, he provided me unflinching encouragement and support in various ways. His overall approach to research activities and his scientific temper have inspired and enriched my growth as a student, teacher and researcher. I am indebted to him more than he knows.

I gratefully acknowledge Dr. Pradeep Sundaresan, my classmate right from elementary school for his advice, supervision, and crucial contribution, which made him a backbone of this research and so too, this thesis. His profound exposure to research environments world over provided immense possibilities which could be experimented with and incorporated into my work. His involvement, accentuated by his originality, has triggered and nourished my intellectual maturity, which I will benefit from, for a long time to come. I am grateful to him in every possible way and hope to continue to benefit from his enthusiastic support in the future.

Many thanks go in particular to Dr. J. Udayakumar, who would have contributed to every idea I deliberated upon, pored through every line that I wrote and given defining touches to every thought that struck me at every stage of my research. I am also grateful to him for giving me the freedom and time not only to consult
him on half baked methodologies but also for putting up, on occasions with some of my unintelligent questions.

I am overwhelmed by the magnanimity shown by Sri. S. Rathish, Director (Operations), KRWSA, who not only opened up the entire archive of records and reports of the Jalanidhi for my reference but also graciously provided me with an opportunity to visit its far-flung project locations. He has also provided me with opportunities, whenever possible, to meet with an assortment of experts concerned with the Jalanidhi as officials, consultants and designates of funding agencies. I believe the quality of my effort has been greatly enhanced by his benevolence for which I shall ever be grateful to him. Equally, I am grateful to Sri. M. Premlal, Director (HRD), my students Smt. Rekha R. Chandran and Smt. Sangeetha of KRWSA and Sri. Sunil Behanan of KWA and the entire gamut of officials belonging to the KRWSA, KWA, SEUF, the Support Organizations, Grama Panchayats, Jilla Panchayats and the Sector Reform Project Team for providing me access to the records and assisting me in the field surveys. These have helped me gain a well rounded picture of the project.

I also wish to thank Dr. Suseel Samuel, Water and Sanitation Specialist, the World Bank, for giving crisp, honest and decisive information on the various parameters of the project. I also wish to place on record the gratitude for the advice and guidance given by Dr. Santhakumar, Associate Professor, Centre for Development Studies, Thiruvananthapuram. To Prof. K.V. Baiju, who joined my small industrious team to lend support and credence to my statistical analyses, I owe a wealth of gratitude.

From my academic background, visiting the beneficiaries of the various scheme and getting a first-hand account of their experience, was as much invigorating as it was rewarding. I was left in doubt as to their enhanced level of awareness and empowerment. To each of these individuals I express my profound thanks.

Even as I was grappling with the demands of my research on the one hand I was privileged to have a very eager group of colleagues headed by the Head of the Department of Civil Engineering, T K M College of Engineering, Kollam, who
not only volunteered to accept a great deal of my official duties but also chipped in with prudent and pertinent counsel, which tremendously helped me. Much as I would have liked to mention each of them by name, I trust this sweeping statement of gratefulness will do justice to their individual contributions. This also added another dimension of obligation to TKM, my alma mater, as it doubled up as my research institution.

Where would the foregoing words of acknowledgement leave my family? My parents deserve special mention for their inseparable support and prayers. My father, the late N Krishnan Nayar, in the first place is the person who demonstrating, by example, the spirit of enquiry and respect for education, showing me the joy of intellectual pursuit ever since I was a child. His memory has fuelled every iota of passion in me as a student and as an individual. My mother, Sabitha K Nayar has inculcated in me the art of soaking in the joys of life even when going through a tough run. Gautham Mohan, my son, thanks for being supportive and caring and minding your own fledgling career admirably when I should have been around to support you.

Words fail me in expressing my depth of indebtedness to my husband whose dedication, love and persistent confidence in me, has taken the load off my shoulder. I owe him for being unselfish in not letting his intelligence, passions, and ambitions collide with mine.

Finally, I would like to thank everybody who was important to the successful realization of the thesis, as well as expressing my apology not only in case I have inadvertently left out anyone who should have been specially mentioned but also not having mentioned every contributor to this thesis, personally, one by one.
