

Acknowledgement

I am deeply indebted to my supervisor, Prof. C.P. Chandrasekhar, whose unstinting support and encouragement ensured that this research work continued on course during my three years at Jawaharlal Nehru University, New Delhi, India. Despite his extremely hectic schedule he maintained his calm; he was genial throughout. Importantly, his several rounds of corrections and detailed comments on each chapter of this thesis have made this work a rewarding experience. The chairperson and the staff of the Centre for Economic Studies and Planning and the School of Social Sciences (CESP) of JNU have supported me in getting me through the administrative routines. I acknowledge the comments of Professor Vikas Rawls on statistical analysis and interpretations.

I wish to record, with gratitude, the assistance extended to me by a number of institutions and individuals in undertaking this extremely challenging task at a late stage of my life. The former Vice-Chancellor of the Open University of Sri Lanka, Prof. Uma Kumaraswamy went out of her way, to grant me special leave enabling me to pursue studies at JNU. Among many others at the Open University, special mention is made of Professors Nandani de Silva, Sudatta Ranasingha and S S Colombage, Dr. Asoka de Silva, Dr. Mahim Mendis, Dr. A S Chandrabose, Dr. L P S Gamini, Mr. S A D Senanayake, Mr. Anton Piyaratne and the librarian Dr. (Ms) W Senaviratne, for helping me in numerous ways. I sincerely thank them all.

Two other institutes in Sri Lanka supported me financially. The National Council for Advance Studies of the University Grants Commission gave me a grant which covered the basic expenses of my stay in India. The National Science Council of Sri Lanka financed my field studies at Hambantota. I should be failing in my duty if I do not record my appreciation of the work done by the field researchers. The peasant farmers from Suriyawewa and Lunugamwehera, who patiently listened and shared their views, helped me elicit data that escape normal questionnaire surveys. Despite the knowledge that this

work will not produce anything directly beneficial for them, they willingly cooperated with me. I will, therefore, dedicate this work to those drought affected poor peasantry.

Finally, I express my gratitude to my wife Padmi and my three children, Upeksaha, Priyanwada and Chatura. My wife had encouraging words for me even during difficult times, while my three children graciously agreed to share the family burden during my sojourn in India. They have made my otherwise depressing long stay outside Sri Lanka easier to endure.
